Product Overview

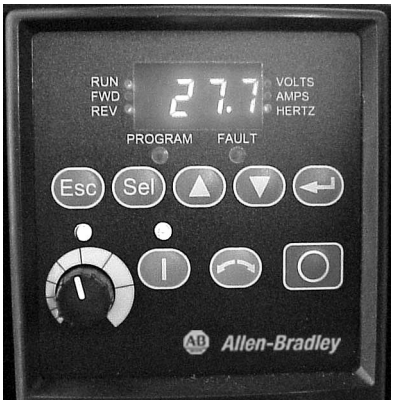
Providing users with powerful motor speed control in a compact, space saving design, the Allen-Bradley® PowerFlex® 4 and PowerFlex 40 AC drives are the smallest and most cost-effective members of the PowerFlex family of drives. Power ratings from 0.2...11 kW (0.25...15 HP) and in voltage classes of 120, 240, 480, and 600 volts are available. The PowerFlex 4 and PowerFlex 40 drives are designed to meet global OEM and End User demands for flexibility, space savings, ease of use, and are cost-effective alternatives for speed control of applications such as machine tools, fans, pumps and conveyors, and material handling systems.

Packaging and Mounting

- Installation can be a virtual snap using the DIN rail mounting feature on A and B frame drives. Panel mounting is also available, providing added flexibility.
- Flange mount drives are available to reduce the overall enclosure size.
- Zero Stacking is allowable for ambient temperatures up to 40 °C (104 °F), saving valuable panel space. 50 °C (122 °F) ambient temperatures are permitted with minimal spacing between drives.
- Integral filtering is available on all 230V single-phase ratings, providing a cost-effective means of meeting EN55011, Class A and B EMC requirements. External filters provide compliance with Class A and B requirements for all PowerFlex 4 and PowerFlex 40 drive ratings.
- An optional IP30, NEMA/UL Type 1 conduit box is easily adapted to the standard IP20 (NEMA Type Open) product, providing increased environmental ratings.
- IP66, NEMA/UL Type 4X/12 (Indoor) for mounting directly in the product environment. Listed by UL to resist dust, dirt, and so on, and survive high-pressure water spray. Also certified by NSF to achieve conformity with international food equipment standards.

Start Up, Programming, and Operation

- An integral keypad provides out of the box operation using the local potentiometer and control keys.
- The 10 most common application parameters are contained in the Basic Program Group, making programming fast and easy.
- The programming keys have the same function as all other PowerFlex drives, so if you can program one PowerFlex drive, you can program them all.
- A 4-digit display with 10 additional LED indicators provides an intuitive display of drive status and information.
- Integral RS-485 communications can be used for programming from a PC. It can also be used in a multi-drop network configuration. A serial converter module provides connectivity to any controller with a DF1 port.
- A NEMA/UL Type 4X remote and NEMA/UL Type 1 handheld LCD keypad provide additional programming and control flexibility, both featuring the popular CopyCat function.



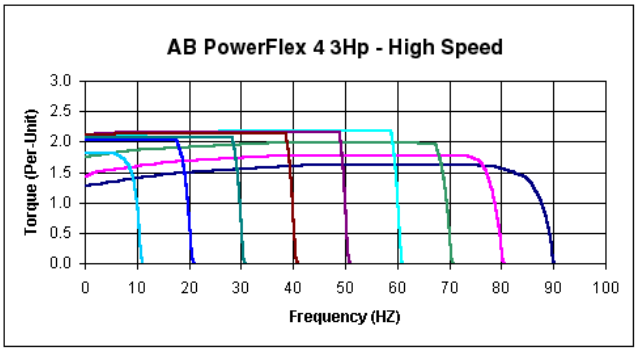
Optimized Performance

- Removable MOV to ground provides trouble-free operation when used on ungrounded distribution systems.
- A relay precharge limits inrush current.
- An Integral brake transistor, available on all ratings (except no brake version), provides dynamic braking capability with simple low-cost brake resistors.
- DIP switch settable 24V DC sink or source control for control wiring flexibility.
- 150% overload for 60 seconds or 200% overload for 3 seconds provides robust overload protection.
- Adjustable pulse-width modulation (PWM) frequency up to 16 kHz delivers quiet operation.

Sensorless Vector Performance

PowerFlex 4

- Drive automatically provides auto boost (IR compensation) and slip compensation.
- Provides excellent speed regulation and high levels of torque across the entire speed range of the drive, and improved speed regulation even as loading increases.

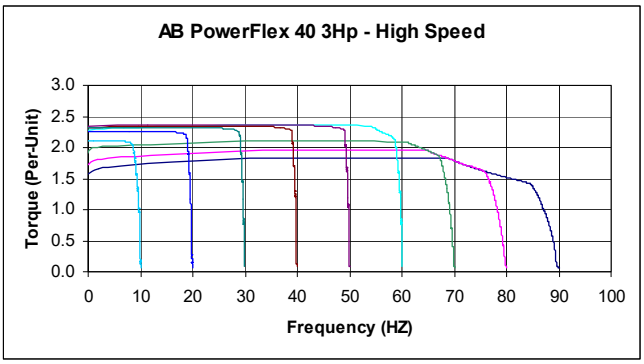


Sensorless Vector Control

PowerFlex 40

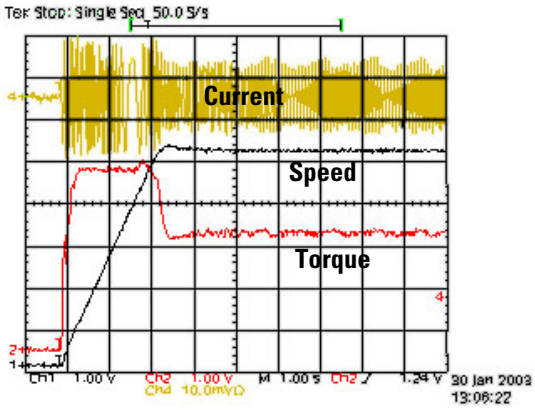
Sensorless Vector Control provides exceptional speed regulation and very high levels of torque across the entire speed range of the drive.

The Autotune feature allows the PowerFlex 40 drive to adapt to individual motor characteristics.



Performance

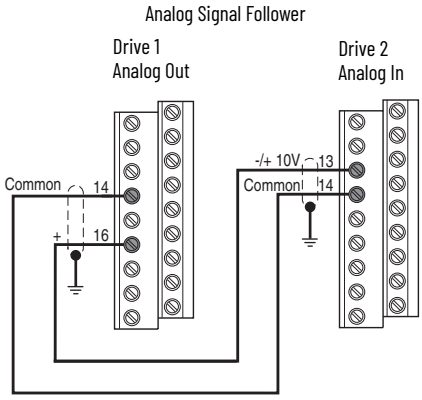
- This graph depicts the ability of a PowerFlex 40 drive to accelerate into at least 150% load. A PowerFlex 4 drive performs similarly, but with a slightly higher acceleration time.
- At 100% motor load, the drive runs the motor at synchronous speed.
- Excellent current regulation
- Linear acceleration
- Best in class digital input response time and repeatability



Performance

- Sensorless Vector Control develops high torque over a wide speed range and adapts to individual motor characteristics.
- Variable PWM allows the drive to output more current at low frequencies.
- Integral PID functionality enhances application flexibility.
- Timer, Counter, Basic Logic, and StepLogic® functions can reduce hardware design costs and simplify control schemes.
  - Timer function: Relay or opto outputs are controlled by the drive performing the timer function. The timer is initiated by activating a digital input that is programmed as "Timer Start."
  - Counter function: Relay or opto outputs are controlled by the drive performing the counter function. The counter function is activated by a digital input that is programmed as "Counter Input."
  - Basic Logic: Relay or opto outputs are controlled by the status of digital inputs that are programmed as "Logic Inputs." Performs basic Boolean logic.
  - StepLogic: Logic-based steps using preset speed settings. Each step can be programmed for a specific speed, direction, and accel/decel profile. Drive outputs can be used to indicate which step is being performed.

I/O



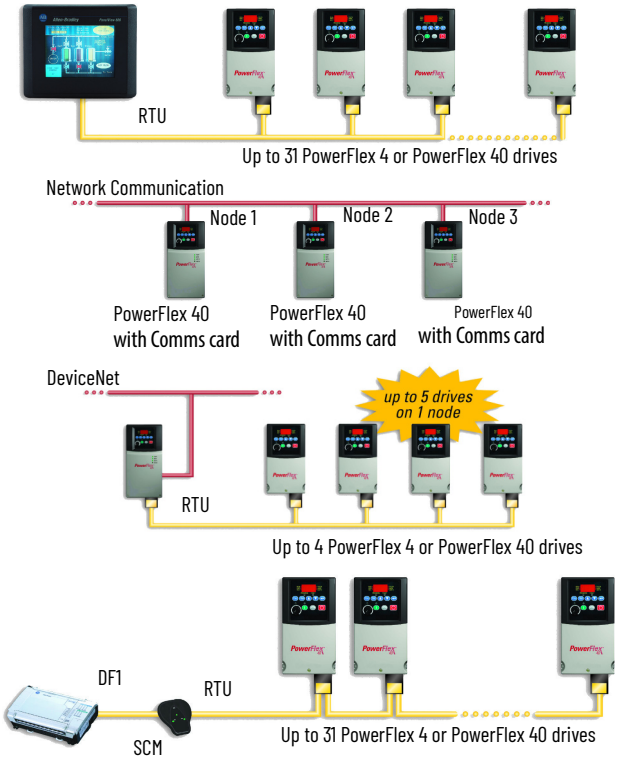
- Two Analog Inputs (one unipolar and one bipolar) are independently isolated from the rest of the drive I/O. These inputs can be toggled between via a digital input.
- Three fixed and four fully programmable Digital Inputs provide application versatility.
- One Analog Output is DIP switch selectable for either 0...10V or 0...20 mA. This scalable, 10-bit output is suitable for metering or as a speed reference for another drive.
- Two Opto Outputs and one form C relay output can be used to indicate various drive, motor or logic conditions.

Communications

- Integral communication cards such as DeviceNet®, EtherNet/IP™, PROFIBUS DP, LonWorks, and ControlNet® can improve machine performance.
- The DSI Wireless Interface Module (WIM) provides a wireless communication interface between a Pocket PC, laptop computer, or desktop computer equipped with Bluetooth wireless technology, and any Allen-Bradley product supporting the DSI protocol.
- Field installed option allows for future addition of standalone drives to a network.
- Online EDS file creation with RSNetWorx™ providing ease of set-up on a network.

Versatile Programming and Network Solutions

- PowerFlex 4 and PowerFlex 40 drives are compatible with any device that acts as an RTU Master and supports standard 03 and 06 RTU commands.
- A network can be configured using PowerFlex 40 drives with optional communication cards for high performance and flexible configuration capabilities.
  - BACnet
  - ControlNet
  - DeviceNet
  - EtherNet/IP
  - LonWorks
  - PROFIBUS DP
- A multi-drive solution can be reached using one PowerFlex 40 DeviceNet option, with the ability for up to five drives to reside on one node.
- Integral RS-485 communications enable the drives to be used in a multi-drop network configuration. A serial converter module (SCM) provides connectivity to any controller with a DF1 port. The SCM can be eliminated if the controller acts as an RTU Master.



PC Programming Software

By using an SCM and Connected Components Workbench™ software or DriveTools™ SP software, programming can be greatly simplified.

Connected Components Workbench Software

- Supports plug and play connectivity through a standard USB connection.
- AppView® tool provides parameter groups for several of the most common applications.
- Create and save custom parameter groups using the CustomView™ tool.
- Supports PowerFlex drives, Micro800™ controllers, and PanelView™ component graphic terminals.

DriveTools SP Software

- Online and offline programming capability
- In-grid and dialog-based parameter editing
- Immediate visual indication of drive and communication status when viewing an online drive
- Integrated HTML Help architecture

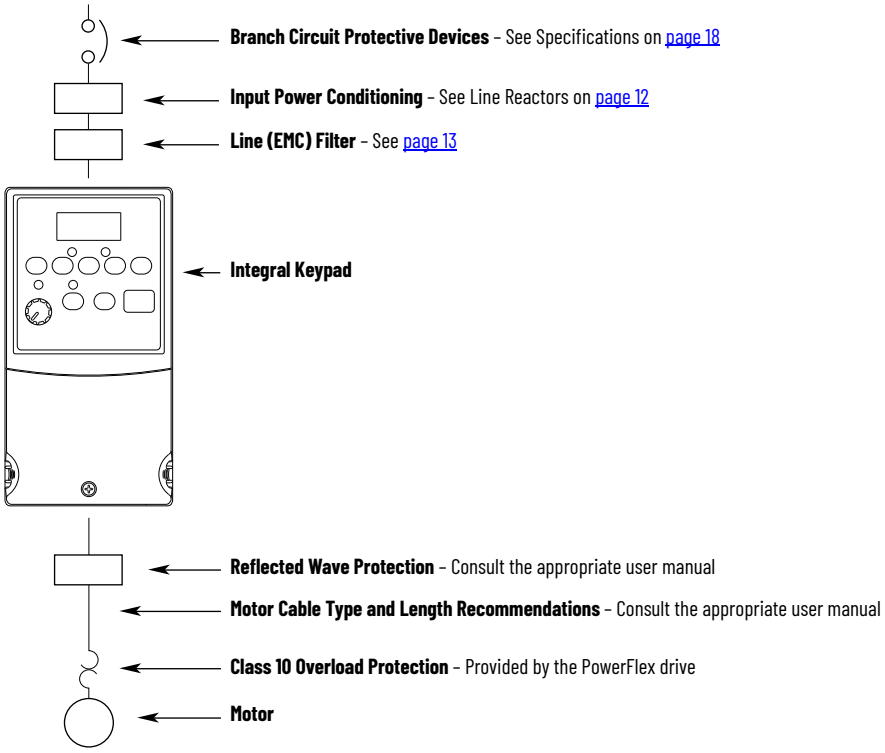
Installation Considerations

PowerFlex 4 and PowerFlex 40 drives have the following built-in protective features to help simplify installation.

- Ground fault protection while starting and running delivers reliable operation
- Electronic motor overload protection increases motor life
- Removable MOV to ground delivers compatibility with ungrounded systems
- 6 kV transient protection provides increased robustness for 380...480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations. Consult the PowerFlex 4 Adjustable Frequency AC Drive User Manual, publication 22A-UM001 or PowerFlex 40 Adjustable Frequency AC Drive User Manual, publication 22B-UM001, available online at rok.auto/literature, for detailed recommendations on input power conditioning, CE conformance (EMC filtering), dynamic braking, reflected wave protection, motor cable types, and motor cable distances.

Block Diagram



Control Wiring

PowerFlex 4

- The control logic is 24V DC and can be set for either Sink or Source control via a DIP switch setting.
- Control terminal screws are sized for a conventional blade screwdriver.
- I/O Terminals 1, 2, and 3 are dedicated for Stop, Start, and Reverse operation respectively. These I/O Terminals can be programmed for 2-wire or 3-wire operation to meet application requirements.
- I/O Terminals 4 and 5 are programmable and provide added flexibility. Programmable functions include:
  - Local Control
  - Preset Frequencies
  - Jog
  - RS-485 Control
  - Second Accel/Decel
  - Auxiliary Fault
  - Clear Fault
- Speed can be controlled via a 0...10V input or 4...20 mA input. Both are electrically isolated from the drive.
- One form C relay can be programmed to provide the status of a wide variety of drive conditions.
- The drive is shipped with a jumper that is installed between I/O Terminals 01 and 11 to allow out of box operation from the keypad.

01	Stop (1)	Coast	The factory-installed jumper or a normally closed input must be present for the drive to start.
02	Start/Run FWD	Not Active	Command comes from the integral keypad by default. To disable reverse operation, see A095 [Reverse Disable].
03	Direction/Run REV	Not Active	
04	Digital Common	–	For digital inputs. Electronically isolated with digital inputs from analog I/O.
05	Digital Input 1	Preset Freq	Program with A051 [Digital In1 Sel].
06	Digital Input 2	Preset Freq	Program with A052 [Digital In2 Sel].
11	+24V DC	–	Drive supplied power for digital inputs. Maximum output current is 100 mA.
12	+10V DC	–	Drive supplied power for 0...10V external potentiometer. Maximum output current is 15 mA.
13	0...10V In (1)	Not Active	For external 0...10V input supply (input impedance = 100 kΩ) or potentiometer wiper.
14	Analog Common	–	For 0...10V In or 4...20 mA In. Electronically isolated with analog inputs from digital I/O.
15	4...20 mA In (1)	Not Active	For external 4...20 mA input supply (input impedance = 250 Ω).
16	RS-485 (DSI) Shield	–	The terminal should be connected to safety ground - PE when using the RS-485 (DSI) communications port.

(1) Only one analog frequency source may be connected at a time. If multiple references are connected simultaneously, an undetermined frequency reference results.

PowerFlex 40

- The control logic is 24V DC and can be set for either Sink or Source control via a DIP switch setting.
- Control terminal screws are sized for a conventional blade screwdriver.
- I/O Terminals 1, 2, and 3 are dedicated for Stop, Start, and Reverse operation respectively. These I/O Terminals can be programmed for 2-wire or 3-wire operation to meet application requirements.
- I/O Terminals 5, 6, 7, and 8 are programmable and provide added flexibility. Programmable functions include Local Control, Jog, Second Accel/Decel, Clear Fault, Preset Frequencies, RS-485 Control, and Auxiliary Fault.
- Speed can be controlled via a 0...10V input and/or 4...20 mA input. Both inputs are independently isolated from the rest of the drive and can be used for applications such as PID. Voltage input can be programmed for bipolar operation.
- The drive is shipped with a jumper that is installed between I/O Terminals 01 and 11 to allow out of box operation from the keypad.
