Variable speed drives
for asynchronous motors
Altivar 61

Ventilation application

Air conditioning application

Pumping application

Applications

The Altivar 61 drive is a frequency inverter for 3-phase asynchronous motors rated between 0.75 kW and 630 kW.

The drive has been designed for state-of-the-art applications in heating, ventilation and air conditioning (HVAC) in industrial and commercial buildings:
- Ventilation
- Air conditioning
- Pumping

The Altivar 61 can reduce operating costs in buildings by optimizing energy consumption whilst improving user comfort.

Its numerous integrated options enable it to be adapted to and incorporated into electrical installations, sophisticated control systems and building management systems.

The need for electromagnetic compatibility and a reduction in harmonics were taken into account at the outset of designing the drive.

Depending on its design characteristics, each type (UL Type 1/IP 20 and/or UL Type 12/IP 54) either has built-in class A or class B EMC filters and DC chokes, or these items are available as optional accessories.

Functions

With its macro-configurations and "Simply Start" menu, the Altivar 61 drive can be used to start up your applications without delay and to make adjustments in virtually no time using user-friendly dialogue tools.

Functions designed specifically for pumping and ventilation applications

- Energy saving ratio, 2-point or 5-point quadratic ratio
- Automatic catching of a spinning load with speed detection
- Adaptation of current limiting according to speed
- Noise and resonance suppression by means of the switching frequency which, depending on the power rating, can be set to up to 16 kHz during operation, and random modulation.
- Preset speeds
- Integrated PID regulator, with preset PID references and automatic/manual ("Auto/Man.") mode
- Electricity and service hours meter
- Detection of absence of fluid, detection of zero flow rate, limiting of flow rate
- Sleep function, wake-up function
- Customer settings with display of physical values: bar, I/s, °C, etc.

Protection functions

- Motor and drive thermal protection, PTC thermal probe management
- Protection against overloads and overcurrents in continuous operation
- Machine mechanical protection via jump frequency function, phase rotation
- Protection of the installation by means of underload, overload and zero flow detection
- Protection via multiple fault management and configurable alarm groups

Safety functions

- Machine safety by means of the integrated "Power Removal" function
This function prevents the motor starting accidentally; it meets the requirements of machine safety standard EN 954-1, category 3 and those of operational safety standard IEC/EN 61508, SIL2 (safety control/signalling applied to processes and systems).
- Installation safety by means of the function for forced operation with inhibition of faults, direction of operation and configurable references.

Flexibility and user-friendliness

The Altivar 61 has numerous configurable logic and analog inputs and outputs in order that it can be optimised for your applications.

It supports the Modbus and CANopen protocols as standard in order to increase the performance of your control systems. It also supports the industry's major communication buses and can be integrated easily into building management (HVAC) systems via option cards.

Furthermore, it features multi-pump cards, enabling it to provide flexible and user-friendly management of multiple pumps.

A comprehensive offer

The Altivar 61 range of variable speed drives extends across a range of motor power ratings from 0.75 kW to 630 kW with three types of power supply:
■ 200…240 V 3-phase, 0.75 kW to 90 kW, UL Type 1/IP 20, (**ATV 61H●●●M3**, **ATV 61H●●●M3X**)
■ 380…480 V 3-phase, 0.75 kW to 630 kW, UL Type 1/IP 20,(**ATV 61H●●●N4**)
■ 380…480 V 3-phase, 0.75 kW to 90 kW, UL Type 12/IP 54, (**ATV 61W●●●N4**, **ATV 61W●●●N4C**),

Altivar 61 UL Type 1/IP 20 drives can also be used in conjunction with motors rated between 0.37 kW and 5.5 kW on a single phase 200…240 V supply (derating is required).

The Altivar 61 drive integrates the Modbus and CANopen protocols as standard as well as numerous functions. These functions can be extended using communication, I/O extension and multi-pump option cards and a "Controller Inside" programmable card (see page 7).

Other external options, such as braking resistors, resistance braking units and filters, are available to complement this offer (see page 7).

The entire range conforms to international standards IEC/EN 61800-5-1, IEC/EN 61800-2, IEC/EN 61800-3, is UL, CSA, DNV, C-Tick, NOM 117 and GOST certified and has been developed to meet the requirements of the directives regarding protection of the environment (RoHS, WEEE, etc) as well of those of the European Directives governing the issuing of the C€ marking.

The Altivar 61 drive can be inserted in an installation's safety system. It integrates the "Power Removal" safety function which prevents the motor from restarting unintentionally.

Electromagnetic compatibility EMC

The incorporation of EMC filters in **ATV 61H●●●M3** and **ATV 61●●●●N4** drives and the recognition of EMC requirements simplifies machine installation and provides a very economical means of meeting C€ marking requirements.

ATV 61W●●●N4C drives feature integrated class B EMC filters, enabling them to meet the requirements of the EN 55011 (class B group 1) and IEC/EN 61800-3 (category C1) standards.

ATV 61H●●●M3X drives have been designed without an EMC filter. Filters are available as an option and can be installed by the user to reduce emission levels, see pages 74 to 77.

Installation

The Altivar 61 drive has been designed to optimize the size of enclosures (floor-standing, wall-mounted, etc):
■ The power part, with IP 54 degree of protection, can be easily mounted outside the enclosure using the kit for flush-mounting in a dust and damp proof enclosure (**VW3 A9 5●●**, see page 23); this type of mounting can be used to limit the temperature rise inside the enclosure or to reduce the size of enclosure required.
■ Ambient temperature inside the enclosure:
□ 50°C without derating corresponding to the drive rating
□ Up to 60°C using the control card fan kit **VW3 A9 4●●** corresponding to the drive rating and, if necessary, by derating the output current (see page 22)
■ Mounting side-by-side (see pages 138, 140 and 144)

The Altivar 61 drive can also be wall-mounted in compliance with the requirements for UL Type 1 using kit **VW3 A9 2●●**, and in compliance with the requirements for IP 21 or IP 31 using kit **VW3 A9 1●●** (see pages 24 and 25).

Variable speed drives
for asynchronous motors
Altivar 61

Dialogue tools

The Altivar 61 drive **1** is supplied with a remote graphic display terminal **2**:
■ The navigation button provides a quick and easy means of accessing the drop-down menus.
■ The graphic screen displays 8 lines of 24 characters of plain text.
■ The advanced functions on the display unit provide access to the more complex drive functions.
■ The display screens, menus and parameters can all be customized for the user or the machine.
■ Online help screens are available.
■ Configurations can be stored and downloaded: four configuration files can be stored.
■ The drive can be connected to several other drives via a multidrop link.
■ It can be located remotely on an enclosure door with IP 54 or IP 65 degree of protection, a standard feature of UL Type 12/IP54 drives.
■ It is supplied with 6 languages installed as standard (English, French, German, Italian, Spanish and Chinese). Other languages can be loaded to the flash memory.

Up to 45 kW at 200…240 V and 75 kW at 380…480 V, the Altivar 61 drive can be controlled using an integrated 7-segment display terminal (see pages 18 and 19).

The PowerSuite software workshop **3** can be used to configure, adjust and debug the Altivar 61 in just the same way as all other Telemecanique speed drives and starters. It can be used via a direct, Ethernet, modem or wireless Bluetooth® connection.

Quick programming

Macro-configuration
The Altivar 61 offers quick and easy programming using macro-configurations corresponding to different applications or uses: start-stop, pumping and ventilation, general use, connection to communication networks, PID regulator.
Each of these configurations is still fully modifiable.

"Simply Start" menu
In just a few steps, the "Simply Start" menu can be used to ensure the application operates correctly, obtain maximum motor performance and ensure motor protection.

The architecture, the hierarchical parameter structure and the direct access functions all serve to make programming quick and easy, even for more complex functions.

Services

The Altivar 61 has numerous built-in maintenance, monitoring and diagnostic functions:
■ Drive test functions with diagnostic screen on the remote graphic display terminal
■ I/O maps
■ Communication maps for the different ports
■ Oscilloscope function that can be viewed using the PowerSuite software workshop
■ Management of the drive installed base via processors with flash memory
■ Remote use of these functions by connecting the drive to a modem via the Modbus port
■ Identification of all the drive's component parts as well as the software versions
■ Fault logs with display of the value of up to 16 variables on occurrence of a fault
■ Display terminal languages loaded in the flash memory
■ A message of up to 5 lines of 24 characters can be stored in the drive.

Variable speed drives
for asynchronous motors
Altivar 61

Options

The Altivar 61 drive **1** can integrate up to two option cards simultaneously*(1)*:
■ I/O extension cards **2** (see pages 30 and 31)
■ Communication cards **2** for use in industrial applications or for HVAC
(see pages 44 to 53)
■ Multi-pump cards **2** for the management of multiple pumps
(see pages 32 to 35)
■ "Controller Inside" programmable card **2**. This card is used to adapt the drive to specific applications quickly and progressively, by decentralizing the control system functions (programming in IEC 61131-3 compliant languages)
(see pages 36 to 43).

External options can be associated with the Altivar 61:
■ Braking units and resistors, see pages 54 to 61
■ DC chokes, line chokes and passive filters, to reduce current harmonics
(see pages 62 to 73)
■ Additional EMC input filters (see pages 74 to 77)
■ Motor chokes and sinus filters for long cable runs or to remove the need for shielding (see pages 78 to 83)

Note: *Please refer to the compatibility summary tables to determine which options are available for individual drives (see pages 84 to 89).*

Integration into control systems and building management systems

The Altivar 61 integrates a combined Modbus or CANopen port for adjustment, supervision and configuration. A second port is available for connecting a Magelis terminal for machine dialogue.

The Altivar 61 drive can also be connected to other communication networks using the communication cards (see pages 44 to 53). All communication protocols designed for use in industrial applications (Ethernet TCP/IP, Fipio, Modbus, Modbus Plus, Uni-Telway, Profibus DP, DeviceNet and INTERBUS) or in building management systems (LONWorks, METASYS N2, APOGEE FLN, BACnet) are available.

The option of powering the control part separately enables communication to be maintained (monitoring, diagnostics) even if there is no power supply to the power part.

The "Controller Inside" programmable card transforms the drive into an automation island:
■ The card integrates its own I/O; it can also manage those of the drive and an I/O extension card.
■ It contains onboard application programs developed in IEC 61131-3 compliant languages, which reduce the control system's response time.
■ Its CANopen master port enables control of other drives and dialogue with I/O modules and sensors.

The two multi-pump cards enable the drive to be adapted for pump applications.
The **VW3 A3 502** multi-pump card ensures the compatibility of pump applications developed for an Altivar 38 drive with an Altivar 61 drive.
The **VW3 A3 503** multi-pump card enables all multi-pump applications to be supported.
Multi-pump cards feature their own I/O. They can manage I/O on the drive as well as those on I/O extension cards. They can also make use of drive parameters such as those for speed, current, torque, etc.

Example of a drive equipped with a communication card and a "Controller Inside" programmable card

(1) The Altivar 61 cannot support more than one option card with the same reference. Please refer to the compatibility tables summarizing the possible combinations for drives, options and accessories on pages 84 to 89.

Electrical control characteristics

Internal supplies available			Short-circuit and overload protection: ■ 1 x 10.5 V ⎓ ± 5% supply for the reference potentiometer (1 to 10 kΩ), maximum current 10 mA ■ 1 x 24 V ⎓ supply (min. 21 V, max. 27 V), maximum current 200 mA.
External + 24 V power supply *(1)* (not supplied)			24 V ⎓ (min. 19 V, max. 30 V) Power 30 W
Analog inputs	AI1-/AI1+		1 bipolar differential analog input ± 10 V (maximum safe voltage 24 V) Max. sampling time: 2 ms ± 0.5 ms Resolution: 11 bits +1 sign bit Accuracy: ± 0.6% for a temperature variation of 60°C Linearity: ± 0.15% of the maximum value
	AI2		1 software-configurable current or voltage analog input: ■ voltage analog input 0...10 V ⎓, impedance 30 kΩ (max. safe voltage 24 V) ■ current analog input X-Y mA by programming X and Y from 0 to 20 mA, with impedance 242 Ω Max. sampling time: 2 ms ± 0.5 ms Resolution: 11 bits Accuracy: ± 0.6% for a temperature variation of 60°C Linearity: ± 0.15% of the maximum value
	Other inputs		See option cards
Configurable voltage and current analog outputs	AO1		1 analog output configurable for voltage or current: ■ voltage analog output 0...10 V ⎓, minimum load impedance 470 Ω ■ current analog output X-Y mA by programming X and Y from 0 to 20 mA, maximum load impedance 500 Ω Max. sampling time: 2 ms ± 0.5 ms Resolution: 10 bits Accuracy: ± 1% for a temperature variation of 60°C Linearity: ± 0.2%
	Other outputs		See option cards
Configurable relay outputs	R1A, R1B, R1C		1 relay logic output, one "N/C" contact and one "N/O" contact with common point Minimum switching capacity: 3 mA for 24 V ⎓ Maximum switching capacity: ■ on resistive load (cos φ = 1): 5 A for 250 V ∿ or 30 V ⎓ ■ on inductive load (cos φ = 0.4 and L/R = 7 ms): 2 A for 250 V ∿ or 30 V ⎓ Max. response time: 7 ms ± 0.5 ms Electrical service life: 100,000 operations
	R2A, R2B		1 relay logic output, one "N/O" contact Minimum switching capacity: 3 mA for 24 V ⎓ Maximum switching capacity: ■ on resistive load (cos φ = 1): 5 A for 250 V ∿ or 30 V ⎓ ■ on inductive load (cos φ = 0.4 and L/R = 7 ms): 2 A for 250 V ∿ or 30 V ⎓ Max. response time: 7 ms ± 0.5 ms Electrical service life: 100,000 operations
	Other outputs		See option cards
Logic inputs LI	LI1...LI5		5 programmable logic inputs, 24 V ⎓ , compatible with level 1 PLC, IEC 65A-68 standard Impedance: 3.5 kΩ Maximum voltage: 30 V Max. sampling time: 2 ms ± 0.5 ms Multiple assignment makes it possible to configure several functions on one input (example: LI1 assigned to forward and preset speed 2, LI3 assigned to reverse and preset speed 3)
	LI6		1 logic input, configurable by a switch as a logic input or as an input for PTC probes Logic input, characteristics identical to inputs LI1...LI5 Input for a maximum of 6 PTC probes mounted in series: ■ nominal value < 1.5 kΩ ■ trip resistance 3 kΩ, reset value 1.8 kΩ ■ short-circuit protection < 50 Ω
	Positive logic (Source)		State 0 if ≤ 5 V or logic input not wired, state 1 if ≥ 11 V
	Negative logic (Sink)		State 0 if ≥ 16 V or logic input not wired, state 1 if ≤ 10 V
	Other inputs		See option cards
Safety input	PWR		1 input for the Power Removal safety function: ■ Power supply: 24 V ⎓ (max. 30 V) ■ Impedance: 1.5 kΩ ■ State 0 if < 2 V, state 1 if > 17 V
Maximum I/O wire size and tightening torque			2.5 mm^2 (AWG 14) 0.6 Nm

Description file		A single eds file is supplied for the whole range on the CD-ROM containing the documentation or on the website: www.telemecanique.com. It contains the description of the drive parameters.	

Variable speed drives
# for asynchronous motors
Altivar 61

Torque characteristics (typical curves)

The curves opposite define the available continuous torque and transient overtorque for both force-cooled and self-cooled motors. The only difference is in the ability of the motor to provide a high continuous torque at less than half the nominal speed.

Open loop applications

1 Self-cooled motor: continuous useful torque *(1)*
2 Force-cooled motor: continuous useful torque
3 Overtorque for 60 seconds maximum for ATV 61W●●●●● (UL Type 12/IP 54 drives)
4 Overtorque for 60 seconds maximum for ATV 61H●●●●● (UL Type 1/IP 20 drives)
5 Torque in overspeed at constant power *(2)*

Open loop applications

Motor thermal protection

Altivar 61 drives feature thermal protection designed specifically for self-cooled or force-cooled variable speed motors. The drive calculates the motor thermal state even when it is switched off.

This motor thermal protection is designed for a maximum ambient temperature of 40°C around the motor. If the temperature around the motor exceeds 40°C, thermal protection should be provided directly by thermistor probes (PTC) integrated in the motor. The probes are managed directly by the drive.

(1) For power ratings ⩽ 250 W, motor derating is 20% instead of 50% at very low frequencies.
(2) The motor nominal frequency and the maximum output frequency can be adjusted from 10 to 500 Hz or 1000 Hz, depending on the rating.
Check the mechanical overspeed characteristics of the selected motor with the manufacturer.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

Special uses

Using Altivar 61 drives with synchronous motors

Altivar 61 drives are also suitable for powering synchronous motors (sinusoidal electromotive force) in open loop mode and are used to achieve performance levels comparable to those associated with an asynchronous motor in sensorless flux vector control.

This drive/motor combination makes it possible to obtain remarkable speed accuracy and maximum torque even at zero speed. The design and construction of synchronous motors are such that they offer enhanced power density and high-speed performance in a compact unit. Drive control for synchronous motors does not cause stalling.

Connecting motors in parallel

The nominal current of the drive must be greater than or equal to the sum of the currents of the motors to be controlled.

In this case, provide external thermal protection for each motor using probes or thermal overload relays. For cable runs over a certain length, taking account of all the tap links, it is advisable either to install an output filter between the drive and the motors or to use the overvoltage limitation function.

If several motors are used in parallel, there are 2 possible scenarios:
■ The motors have equal power ratings, in which case the torque characteristics will remain optimized after the drive has been configured
■ The motors have different power ratings, in which case the torque characteristics will not be optimized for all the motors.

In drive > In1 + In2 +…Inx

Connecting motors in parallel
Switching the motor at the drive output

The drive can be switched when locked or unlocked. If the drive is switched on-the-fly (drive unlocked), the motor is controlled and accelerates until it reaches the reference speed smoothly following the acceleration ramp. This use requires configuration of the automatic catching a spinning load ("catch on the fly") and the motor phase loss on output cut functions.

Typical applications: loss of safety circuit at drive output, bypass function, switching of motors connected in parallel.
On new installations, it is recommended that the Power Removal safety function is used.

KM1: Output contactor
t1: deceleration without ramp (freewheel)
t2: acceleration with ramp
N: Speed

Example of loss of output contactor

Test on a low power motor or without a motor

In a testing or maintenance environment the drive can be checked without having to switch to a motor with the same rating as the drive (particularly useful in the case of high power drives). This use requires deactivation of motor phase loss function.

*(1) These values are for a nominal switching frequency of 12 kHz up to ATV 61HD45M3X or of 2.5 kHz for
ATV 61HD55M3X…HD90M3X drives for use in continuous operation.
The switching frequency is adjustable from 1…16 kHz up to ATV 61HD45M3X, from 2.5…12 kHz for ATV 61HD55M3X and
from 2.5…8 kHz for ATV 61HD75M3X, HD90M3X drives.
Above 2.5 or 12 kHz, depending on the rating, the drive reduces the switching frequency itself in the event of an excessive
temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current, see
derating curves on pages 138 to 141.*
(2) Typical value for the indicated motor power and for the maximum prospective line Isc.
*(3) The ATV 61HD55M3X…HD90M3X drives come in a reinforced version as standard, enabling them to operate in particular
environmental conditions; see the environmental conditions on page 9.
To order the reinforced version of the ATV 61H●●●M3 and ATV 61HD11M3X...HD45M3X drives, add at the end of the
reference:
- S337 for ATV 61H●●●M3. Example: ATV 61H075M3 becomes ATV 61H075M3S337.
- 337 for ATV 61H●●●M3X. Example: ATV 61HD11M3X becomes ATV 61HD11M3X337.
If a reinforced version of the drive is supplied for particular environmental conditions, it must come with a remote graphic display
terminal.*
*(4) All drives come with a remote graphic display terminal. The ATV 61H●●●M3 and ATV 61HD11M3X...ATV 61HD45M3X drives
can be ordered without a graphic display terminal. In this case, add a Z at the end of the reference. They will then come
equipped with an integrated 7-segment display terminal.
Example: ATV 61H075M3 without a graphic display terminal becomes ATV 61H075M3Z.*
(5) A line choke must be used, see page 68.
(6) Drive supplied without EMC filter. EMC filters are available as an option, see page 76.
*(7) Drive supplied as standard with a DC choke, which must be used when connecting the drive to the 3-phase supply.
For connections to the DC bus, the drive can be ordered without a DC choke by adding D at the end of the reference.
Example: ATV 61HD55M3X becomes ATV 61HD55M3XD.*
*(8) Drive supplied without plate for EMC mounting. It is included in the UL Type 1 or IP 31 conformity kits, to be ordered separately,
see pages 24 and 25.*

Note: *Consult the tables summarizing the possible combinations: drives, options and accessories, see pages 84 to 87.*

630	900	1091	964	718	50					

(1) *These values are for a nominal switching frequency of 12 kHz up to ATV 61HD75N4, of 4 kHz for ATV 61HD90N4 or of 2.5 kHz for ATV 61HD11N4…HC63N4 drives for use in continuous operation.*
The switching frequency is adjustable from 1…16 kHz up to ATV 61HD75N4 and from 2…8 kHz for ATV 61HD90N4…ATV 61HC63N4 drives.
Above 2.5, 4 or 12 kHz, depending on the rating, the drive reduces the switching frequency itself in the event of an excessive temperature rise. For continuous operation above the nominal switching frequency, derate the nominal drive current, see derating curves on pages 138 to 143.
(2) *Typical value for the indicated motor power and for the maximum prospective line Isc.*
(3) *The ATV 61HD90N4…HC63N4 drives come in a reinforced versions as standard, enabling them to operate in particular environmental conditions; see the environmental conditions on page 9.*
*To order the reinforced version of the ATV 61H075N4...HD75N4 drives, add **S337** at the end of the reference. Example: ATV 61H075N4 becomes **ATV 61H075N4S337**.*
If a reinforced version of the drive is supplied for particular environmental conditions, it must come with a remote graphic display terminal.
The ATV 61HD90N4…HC63N4 drives come in the reinforced version as standard.
(4) *All drives come with a remote graphic display terminal. The ATV 61H075N4...ATV 61HD75N4 drives can be ordered without a graphic display terminal. In this case, add a **Z** at the end of the reference. They will then come equipped with an integrated 7-segment display terminal.*
*Example: ATV 61H075N4 without a graphic display terminal becomes **ATV 61H075N4Z**.*
(5) *Drive supplied as standard with a DC choke, which must be used when connecting the drive to the 3-phase supply.*
For connections to the DC bus, the drive can be ordered without a DC choke by adding D at the end of the reference.
*Example: ATV 61HD90N4 becomes **ATV 61HD90N4D**.*
(6) *Drive supplied without plate for EMC mounting. Depending on the rating, the plate is included in the UL Type 1 conformity kit and/or in the IP 31 conformity kit, to be ordered separately:*
- for ATV 61HD90N4…ATV 61HC31N4 drives, order the UL Type 1 or IP 31 conformity kit, see pages 24 and 25,
- for ATV 61HC40N4…HC63N4 drives, order the IP 31 conformity kit, see page 25.

Note: *Consult the tables summarizing the possible combinations: drives, options and accessories, see pages 84 to 87.*

(2) Typical value for the indicated motor power and for the maximum prospective line Isc.
(3) These drives can be ordered in a reinforced version, enabling them to operate in particular environmental conditions; see
*environmental conditions on page 9. In this case, add **337** at the end of the reference.*
*Example: ATV 61W075N4C becomes **ATV 61W075N4C337**.*
(4) Drives supplied with 2 EMC plates:
- 1 for UL Type 12 conformity, to be installed by yourself,
- 1 for IP 54 conformity, already installed.
(5) These drives can be ordered with a 24 V ⎓ power supply, allowing an additional consumption of 250 mA. In this case, add 24 at
the end of the reference.
*Example: ATV 61W075N4C becomes **ATV 61W075N4C24.***

***Note:** Consult the tables summarizing the possible combinations: drives, options and accessories, see pages 88 and 89.*

Altivar 61
Option: accessories

Adapter for 115 V $\sim$ logic inputs

This adapter is used to connect 115 V $\sim$ logic signals to the logic inputs on the drive or an I/O extension card.

7 logic inputs with capacitive impedance at 60 Hz of 0.22 µF are available for connecting the logic signals:
■ Max. current: 200 mA
■ Response time: 5 ms to change from state 0 to state 1, 20 ms to change from state 1 to state 0
■ Logic state 0 for a voltage below 20 V, logic state 1 for a voltage between 70 V and 132 V
The power supply must be provided by a 115 V $\sim$ external power supply (min. 70 V, max. 132 V).

Description	Reference	Weight kg
Adapter for 115 V $\sim$ logic inputs	**VW3 A3 101**	–

Control card fan kit

This kit is required for ATV 61HD18M3X…HD45M3X and ATV 61HD22N4…HD75N4 drives.
It enables the drive to operate at an ambient temperature of 50°C to 60°C, for example, if it is mounted in an IP 54 enclosure. The circulation of air around the electronic cards prevents the formation of hot spots.
Check the derating to be applied to the drive nominal current, see derating curves on pages 138 to 143.

The kit **1** is mounted on the upper part of the drive. It is powered by the drive.
It consists of:
■ A fan subassembly
■ Fixing accessories
■ A manual

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: accessories

ATV 61HU75N4 flush-mounted

ATV 61HC31N4D flush-mounted

Kit for flush-mounting in a dust and damp-proof enclosure

This kit can be used to mount the power part of the drive outside the enclosure (IP 54 degree of protection), which reduces the power dissipated into the enclosure, see page 146.
It is available for ATV 61H●●●M3, ATV 61H●●●M3X,
ATV 61HD55M3XD…ATV 61HD90M3XD, ATV 61HD90N4…HC31N4 and
ATV 61HD90N4D…ATV 61HC31N4D drives.

With this type of mounting, the maximum internal temperature in the enclosure can then reach 60°C without it being necessary to derate the drive current.
Between 50°C and 60°C, a control card fan kit must be used for the
ATV 61HD18M3X…HD45M3X and ATV 61HD22N4…HD75N4 drives to prevent hot spots, see page 22.

The back of the enclosure must be drilled and cut out for this type of mounting.

The kit consists of:
■ A metal frame of the right size for the drive rating
■ Corner pieces
■ Seals
■ A fan support. This can be used to move the fans so that they can be accessed from the front of the enclosure
■ Fixing accessories
■ A cutting and drilling template
■ A manual.

IP 21 or IP 31 conformity kits

Kits for IP 21 or IP 31 conformity (mounting outside the enclosure)

When the drive is mounted directly on a wall outside the enclosure, this kit can be used to ensure conformity with IP 21 or IP 31 degree of protection when connecting the cables with a cable gland.
The shielding is connected inside the kit.

For ATV 61H●●●M3, ATV 61HD11M3X…HD45M3X and ATV 61H075N4...HD75N4 drives, the kit conforms to IP 21 degree of protection.
It consists of:
■ All the mechanical parts **1** including a drilled plate **2** for attaching the cable glands **3**
■ Fixing accessories
■ A manual.

For ATV 61HD55M3X…HD90M3X and ATV 61HD90N4...HC63N4 drives, the kit conforms to IP 31 degree of protection.
It consists of:
■ An IP 54 casing **4** used to maintain the IP 54 degree of protection for the power part
■ An EMC plate with cable clips **5**
■ An IP 31 cover **6**
■ Fixing accessories
■ A manual.

Remote graphic display terminal
(this display terminal can be supplied with the drive or ordered separately)

This display terminal is attached to the front of the drive. In the case of drives supplied without a graphic display terminal, it covers the integrated 7-segment display terminal.
It can be:
■ Used remotely in conjunction with the appropriate accessories (see below)
■ Connected to several drives using multidrop link components (see page 29)
It is used:
■ To control, adjust and configure the drive
■ To display the current values (motor, input/output values, etc.)
■ To save and download configurations; 4 configuration files can be saved.
The terminal's maximum operating temperature is 60°C and it features IP 54 protection.

Description
1 Graphic display:
   - 8 lines, 240 x 160 pixels
   - Large digits that can be read from 5 m away
   - Supports display of bar charts
2 Assignable function keys F1, F2, F3, F4:
   - Dialogue functions: direct access, help screens, navigation
   - Application functions: "Local Remote", preset speed
3 "STOP/RESET": local control of motor stop/fault reset
4 "RUN": local control of motor operation
5 Navigation button:
   - Press: saves the current value (ENT)
   - Turn ±: increases or decreases the value, takes you to the next or previous line.
6 "FWD/REV": reverses the direction of rotation of the motor
7 "ESC": aborts a value, a parameter or a menu to return to the previous selection

Note: *Keys 3, 4 and 6 can be used to control the drive directly.*

## Graphic display terminal accessories

The available accessories are:
■ A remote mounting kit for mounting on an enclosure door with IP 54 degree of protection. It includes:
☐ All the mechanical fittings
☐ The screws and bolts
■ A transparent door which attaches to the remote mechanics to achieve IP 65 degree of protection
■ A cable equipped with two RJ45 connectors so that the graphic display terminal can be connected to the Altivar 61 drive (1, 3, 5 or 10 m lengths available)
■ An RJ45 female/female adapter for connecting the VW3 A1 101 graphic display terminal to the VW3 A1 104 R●●● remote cable

PowerSuite software workshop

The PowerSuite software workshop offers the following benefits:
■ Messages can be displayed in plain text in several languages (English, French, German, Italian and Spanish)
■ Work can be prepared in the design office without having to connect the drive to the PC
■ Configurations and settings can be saved to floppy disk or hard disk and downloaded to the drive
■ Print facility
■ Altivar 38 files can be converted for transfer to an Altivar 61 drive
■ Oscillograms can be displayed
See pages 178 to 181.

Variable speed drives
for asynchronous motors
Altivar 61
Options: I/O extension cards

Presentation

Altivar 61 drives can be specially adapted to particular application areas by installing I/O extension cards.

Two models are available:
■ Card with logic I/O featuring:
□ 1 relay logic output ("C/O" contact)
□ 4 x 24 V ⎓ positive or negative logic inputs
□ 2 x 24 V ⎓ open collector positive or negative logic outputs
□ 1 input for PTC probes

■ Card with extended I/O featuring:
□ 1 differential current analog input (0…20 mA)
□ 1 software-configurable voltage (0…10 V ⎓) or current (0…20 mA) analog input
□ 2 software-configurable voltage (± 10 V ⎓, 0…10 V) or current (0…20 mA) analog outputs
□ 1 relay logic output
□ 4 x 24 V ⎓ positive or negative logic inputs
□ 2 x 24 V ⎓ open collector positive or negative logic outputs
□ 1 input for PTC probes
□ 1 frequency control input

VW3 A3 202

Characteristics

Logic I/O card VW3 A3 201

Internal supplies available		Short-circuit and overload protection: ■ 1 x 24 V ⎓ supply (min. 21 V, max. 27 V), maximum current 200 mA for the complete drive and I/O extension card assembly ■ 1 x 10.5 V ⎓ supply (± 5%) for the reference potentiometer (1 to 10 kΩ), max. current 10 mA
Configurable relay output	R3A, R3B, R3C	1 relay logic output, one "N/C" contact and one "N/O" contact with common point. Minimum switching capacity: 3 mA for 24 V ⎓ Maximum switching capacity: ■ on resistive load (cos φ = 1): 5 A for 250 V ∼ or 30 V ⎓ ■ on inductive load (cos φ = 0.4 and L/R = 7 ms): 2 A for 250 V ∼ or 30 V ⎓ Electrical service life: 100,000 operations Maximum response time: 7 ms ± 0.5 ms
Logic inputs	LI7…LI10	4 programmable logic inputs, 24 V ⎓, compatible with level 1 PLC, IEC 65A-68 standard Impedance 3.5 kΩ Maximum voltage: 30 V Multiple assignment makes it possible to configure several functions on one input Maximum sampling time: 2 ms ± 0.5 ms
	Positive logic (Source)	State 0 if ⩽ 5 V or logic input not wired, state 1 if ⩾ 11 V
	Negative logic (Sink)	State 0 if ⩾ 16 V or logic input not wired, state 1 if ⩽ 10 V
Logic outputs	LO1, LO2	2 x 24 V ⎓ assignable open collector positive logic (Source) or negative logic (Sink) outputs, compatible with level 1 PLC, IEC 65A-68 standard 24 V ⎓ internal or 24 V ⎓ external power supply (min. 12 V, max. 30 V) Maximum current: 200 mA Logic output common (CLO) isolated from other signals Maximum sampling time: 2 ms ± 0.5 ms. The active state is software-configurable as is a delay for each switching operation
Input for PTC probes	TH1+/TH1-	1 input for a maximum of 6 PTC probes mounted in series: ■ nominal value < 1.5 kΩ ■ trip resistance 3 kΩ, reset value 1.8 kΩ ■ short-circuit protection < 50 Ω
Maximum I/O connection capacity and tightening torque		1.5 mm² (AWG 16) 0.25 Nm

Extended I/O card VW3 A3 202

Internal supplies available		Short-circuit and overload protection: ■ 1 x 24 V ⎓ supply (min. 21 V, max. 27 V), max. current 200 mA for the complete drive and I/O extension card assembly ■ 1 x 10.5 V ⎓ supply (± 5%) for the reference potentiometer (1 to 10 kΩ), max. current 10 mA
Analog inputs AI	AI3+/AI3-	1 X-Y mA differential current analog input by programming X and Y from 0 to 20 mA, with impedance 250 Ω Maximum sampling time: 5 ms ± 1 ms Resolution: 11 bits + 1 sign bit Accuracy: ± 0.6% for a temperature variation of 60°C Linearity: ± 0.15% of the maximum value
	AI4	1 software-configurable current or voltage analog input: ■ voltage analog input 0…10 V ⎓, impedance 30 kΩ (maximum safe voltage 24 V) ■ X-Y mA current analog input by programming X and Y from 0 to 20 mA, with impedance 250 Ω Maximum sampling time: 5 ms ± 1 ms Resolution: 11 bits Accuracy: ± 0.6% for a temperature variation of 60°C Linearity: ± 0.15% of the maximum value
Analog outputs	AO2, AO3	2 software-configurable current or voltage analog outputs: ■ voltage analog output ± 10 V ⎓, 0…10 V, minimum load impedance 470 Ω ■ X-Y mA current analog output by programming X and Y from 0 to 20 mA, maximum load impedance 500 Ω Maximum sampling time: 5 ms ± 1 ms Resolution: 10 bits Accuracy: ± 1% for a temperature variation of 60°C Linearity: ± 0.2% of the maximum value
Configurable relay output	R4A, R4B, R4C	1 relay logic output, one "N/C" contact and one "N/O" contact with common point. Minimum switching capacity: 3 mA for 24 V ⎓ Maximum switching capacity: ■ on resistive load (cos φ = 1): 5 A for 250 V ∼ or 30 V ⎓ ■ on inductive load (cos φ = 0.4 and L/R = 7 ms): 1.5 A for 250 V ∼ or 30 V ⎓ Electrical service life: 100,000 operations Maximum response time: 10 ms ± 1 ms
Logic inputs	LI11…LI14	4 programmable logic inputs, 24 V ⎓, compatible with level 1 PLC, IEC 65A-68 standard Impedance 3.5 kΩ Maximum voltage: 30 V Multiple assignment makes it possible to configure several functions on one input Maximum sampling time: 5 ms ± 1 ms
	Positive logic (Source)	State 0 if ≤ 5 V or logic input not wired, state 1 if ≥ 11 V
	Negative logic (Sink)	State 0 if ≥ 16 V or logic input not wired, state 1 if ≤ 10 V
Logic outputs	LO3, LO4	2 x 24 V ⎓ assignable open collector positive logic (Source) or negative logic (Sink) outputs, compatible with level 1 PLC, IEC 65A-68 standard Maximum voltage: 30 V Maximum current: 200 mA Logic output common (CLO) isolated from other signals Maximum sampling time: 5 ms ± 1 ms. The active state is software-configurable as is a delay for each switching operation
Input for PTC probes	TH2+/TH2-	1 input for a maximum of 6 PTC probes mounted in series: ■ nominal value < 1.5 kΩ ■ trip resistance 3 kΩ, reset value 1.8 kΩ ■ short-circuit protection < 50 Ω
Frequency control input	RP	Frequency range: 0…30 kHz Cyclic ratio: 50 % ± 10 % Maximum sampling time: 5 ms ± 1 ms Maximum input voltage 30 V, 15 mA Add a resistor if the input voltage is greater than 5 V (510 Ω for 12 V, 910 Ω for 15 V, 1.3 kΩ for 24 V) State 0 if < 1.2 V, state 1 if > 3.5 V
Maximum I/O connection capacity and tightening torque		1.5 mm² (AWG 16) 0.25 Nm

(1) The Altivar 61 cannot support more than one I/O card with the same reference. Please refer to the compatibility tables summarizing the possible combinations for drives, options and accessories on pages 84 to 89.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: Multi-pump cards

Presentation

Multi-pump cards are used to adapt the drive for pump applications.
Various predefined configurable applications are sold by Schneider Electric and its partners.
In order to protect our know-how, it is not possible to transfer the program from the card to the PC.
A single multi-pump card can be fitted in the Altivar 61 drive. It can be combined with another option card (I/O extension or communication). Consult the tables summarizing the possible combinations: drives, options and accessories, see pages 84 to 89.

Each multi-pump card consists of:
■ 10 logic inputs, 2 of which can be used for 2 counters
■ 2 analog inputs
■ 6 logic outputs
■ 2 analog outputs
■ A master port for the CANopen bus.
If the power consumption table does not exceed 200 mA, this card can be powered by the ATV 61H●●●●● drives.
Otherwise, an external 24 V $\overline{}$ power supply must be used.
The ATV 61W●●●N4A24 and ATV 61W●●●N4C24 variable speed drives incorporate a 24 V $\overline{}$ power supply and allow an additional consumption of 250 mA.

Multi-pump cards can also use:
■ The drive I/O
■ The I/O extension card I/O
■ The drive parameters (speed, current, torque, etc.).

The Altivar 61 drive:
■ Incorporates all the application functions for managing your pumps:
sleep, wake-up, zero flow detection, fluid absence detection, underload detection, overload detection, PID regulator with preset PID references
■ Is used to adjust your pumps' operating points:
2/5-point quadratic ratio, energy saving ratio
■ Protects your pumps:
motor thermal protection, PTC management, low speed detection and time delay.
Description

1 9-way male SUB-D connector for connection to the CANopen bus.

2 Connector with removable screw terminals, 6 contacts at intervals of 3.81 for the 24 V $\overline{}$ power supply and 4 logic inputs.

3 3 connectors with removable screw terminals, 6 contacts at intervals of 3.81 for 6 logic inputs, 6 logic outputs, 2 analog inputs, 2 analog outputs and 2 commons.

4 5 LEDs, comprising:
■ 1 to indicate the presence of the 24 V $\overline{}$ power supply
■ 1 to indicate a program execution fault
■ 2 to indicate the CANopen bus communication status
■ 1 controlled by the application program.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: Multi-pump cards

Single variable mode

Single variable mode with auxiliary pump

Operation
Multi-pump cards have the following basic operating modes:

Single variable
The same variable pump is always used.
Fixed flow pumps are started in ascending order of the logic outputs.
Fixed flow pumps are stopped in descending order of the logic outputs.

Multiple variable
All the pumps can be variable. The variable pump is chosen according to its operating time. The pump with the shortest operating time is selected. Fixed pumps are started and stopped in ascending and descending order of the logic outputs respectively.

Switching the auxiliary pumps
You start by selecting the pump with the shortest operating time.
You stop a pump by selecting the pump with the longest operating time.

Limiting the operating time between pumps
A relative operating time differential between each pump can be programmed to ensure better distribution of operating times, thereby limiting pump wear.
If the total operating time differential between an operating auxiliary pump and one which is off exceeds the programmed differential, the first pump is stopped and replaced by the second one.

Continuity of service for your installation
If a pump is faulty (information on the Lix logic input) it is not taken into consideration and the start and stop conditions are determined by the other pumps.
It is possible for each pump to:
■ Display the operating time
■ Reset the counter
■ Save the operating times.

Variable speed drives
for asynchronous motors
Altivar 61
Option: Multi-pump cards

VW3 A3 502 multi-pump card

The **VW3 A3 502** multi-pump card ensures the compatibility of pump applications developed for an Altivar 38 drive with an Altivar 61 drive.

The card's 9 operating modes are as follows:
■ OFF: no function is activated; this mode is used in particular during the installation's maintenance
■ Single variable
■ Multiple variable
■ Single variable with changeover of auxiliary pumps
■ Multiple variable with changeover of auxiliary pumps
■ Single variable with limited operating time
■ Multiple variable with limited operating time
■ Single variable with changeover of auxiliary pumps and limited operating time
■ Multiple variable with changeover of auxiliary pumps and limited operating time.

VW3 A3 503 multi-pump card

The **VW3 A3 503** multi-pump card is used to support all multi-pump applications.

In addition to the existing operating modes, it is possible to develop new applications: booster station, irrigation, etc.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

Presentation

The "Controller Inside" programmable card is used to adapt the variable speed drive to specific applications by integrating control system functions.

Various predefined configurable applications are sold by Schneider Electric and its partners.
The PS 1131 software workshop for PC is used for programming and debugging new applications, quickly and in an open-ended manner (see page 39).
It is not possible to transfer the program from the card to the PC, which enables us to protect our know-how.

A single "Controller Inside" programmable card can be installed in the Altivar 61 drive. It can be combined with another option card (I/O extension or communication). Consult the tables summarizing the possible combinations: drives, options and accessories, see pages 84 to 89.

The "Controller Inside" programmable card has:
■ 10 logic inputs, 2 of which can be used for 2 counters or 4 of which can be used for 2 incremental encoders
■ 2 analog inputs
■ 6 logic outputs
■ 2 analog outputs
■ A master port for the CANopen bus
■ A PC port for programming with the PS 1131 software workshop
If the power consumption table does not exceed 200 mA, this card can be powered by the drive. Otherwise, an external 24 V ⎓ power supply must be used.

The ATV 61W●●●N4A24 and ATV 61W●●●N4C24 variable speed drives incorporate a 24 V ⎓ power supply and allow an additional consumption of 250 mA.

The "Controller Inside" programmable card can also use:
■ The drive I/O
■ The I/O extension card I/O
■ The encoder interface card points counter
■ The drive parameters (speed, current, torque, etc.).

Description

1 RJ45 connector for connecting the PS 1131 software workshop via an RS 485 serial link.
Connection to the PC is via a cable and an RS 232/RS 485 connector included in the VW3 A8 106 PowerSuite for PC connection kit.

2 9-way male SUB-D connector for connection to the CANopen bus.

3 Connector with removable screw terminals, 6 contacts at intervals of 3.81 for the 24 V ⎓ power supply and 4 logic inputs.

4 3 connectors with removable screw terminals, 6 contacts at intervals of 3.81 for 6 logic inputs, 6 logic outputs, 2 analog inputs, 2 analog outputs and 2 commons.
5 5 LEDs, comprising:
■ 1 to indicate the presence of the 24 V ⎓ power supply
■ 1 to indicate a program execution fault
■ 2 to indicate the CANopen bus communication status
■ 1 controlled by the application program

Variable speed drives for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

Independent machine with multiwire system

Independent machine with CANopen bus

Modular machine with Ethernet TCP/IP network

Dialogue

Human-machine dialogue with the application programmed in the "Controller Inside" programmable card is possible using:
■ The Altivar 61 graphic display terminal
■ A Magelis industrial HMI terminal connected to the drive Modbus port
■ A Magelis industrial HMI terminal connected to the Ethernet TCP/IP network (if the drive is equipped with an Ethernet TCP/IP communication card)

A graphic terminal menu is dedicated to the "Controller Inside" programmable card. This menu can be customized by the card program according to the application.

Any industrial HMI terminal which supports the Modbus protocol can be used to display and modify the "Controller Inside" programmable card parameters.
The Modbus server provides access to 2 Kwords (% MW, etc) in the card.

Master CANopen communication

The master CANopen port on the "Controller Inside" programmable card can be used to extend the I/O capacity and to control other CANopen slave devices.

Communication with a PLC

The Altivar 61 drive equipped with a "Controller Inside" programmable card fits easily into complex architectures.
Regardless of which bus or network is being used (Ethernet TCP/IP, Modbus/Uni-Telway, FIPIO, Modbus Plus, Profibus DP, INTERBUS, etc.), the PLC can communicate with the "Controller Inside" programmable card and the drive.
The periodic variables can still be configured as required.

Clock

A clock backed up by a lithium battery makes it possible to have a log of events that have occurred. When the "Controller Inside" programmable card is installed in the drive, the drive faults are automatically time and date-stamped without special programming.

(2) This common point is also the drive 0 V.

⊕ **Telemecanique**

Functions

Variable speed drives
for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

PS 1131 software workshop

The PS 1131 software workshop conforms to international standard IEC 61131-3, and includes all the functions for programming and setting up the "Controller Inside" programmable card.
It includes the configurator for CANopen.
It is designed for Microsoft Windows® 98, Microsoft Windows® NT 4.0, Microsoft Windows® Millennium, Microsoft Windows® 2000 Professional and Microsoft Windows® XP operating systems.

It benefits from the user-friendly interface associated with these operating systems:
■ Pop-up menus
■ Function blocks
■ Online help.
The PS 1131 software workshop is available in both English and German.

The programming and debugging tools are accessible via the application browser. This provides the user with an overview of the program and rapid access to all the application components:
■ Program editor
■ Function block editor
■ Variables editor
■ Animation tables editor
■ Runtime screens editor.

Modular structured programming

The PS 1131 software workshop is used to structure an application into function modules consisting of sections (program code), animation tables and runtime screens. Each program section has a name and is programmed in one of the six available languages. To protect know-how or prevent any accidental modification, each section can be write-protected or read/write-protected.

Exporting/importing function modules
It is possible to export all or part of the tree structure in function modules.

Program structure and execution of an application

The program structure is single-task. It consists of several subroutines.
Exchanges with the drive are performed by a function block available in the standard library.
Cycle execution can be either cyclic or periodic. A software watchdog, which can be configured between 100 and 800 ms by the user, monitors the cycle time.
A task can be synchronized with the drive's main task to improve repeat accuracy in motion control applications.

Cyclic execution
Once each cycle ends, execution of a new cycle begins. The cycle execution must last for at least 5 ms.

Periodic execution
The program is executed periodically, and the period can be set by the user between 5 and 100 ms. Cycle execution must last for less than the defined period. Drive response in the event of the cycle time being exceeded can be managed by the program.

```
┌──────────────────────────────┐
│      Cyclic task or          │
│      start of period         │

```

Example of cycle execution for the "Controller Inside" programmable card connected on a CANopen bus

Variable speed drives
# for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

Example of Ladder language programming

Example of Structured Text language programming

Example of Grafcet language programming

Programming languages

6 programming languages are available:
- Ladder language (LD)
- Structured Text language (ST)
- Grafcet language (SFC)
- Instruction List language (IL)
- Function block diagram (FBD)
- Continuous Flow Chart (CFC)

Ladder Diagram (LD)

A Ladder language program consists of a set of rungs executed sequentially.
A rung consists of several lines.
A line consists of several contacts and a coil.
The language objects can be entered and displayed as symbols or tags as required.
The Ladder language editor enables the immediate call of entry help functions such as access to function libraries and access to the variables editor.

Structured Text (ST)

Structured Text language is a sophisticated algorithmic type language which is particularly well-suited to programming complex arithmetical functions, manipulating tables, message handling, etc.
Structured Text language enables direct transcription of an analysis based on a flow chart, and is organized in statements.

Grafcet language (SFC)

Grafcet language is used to describe the sequential part of the control system in a simple, graphic way. It corresponds to the "Sequential Function Chart" (SFC) language described in standard IEC 61131-3.
Programs written in Grafcet (SFC) language consist of:
- Macro-steps which are the grouping of a set of steps and transitions
- Steps with which the actions to be performed can be associated
- Transitions with which the conditions are associated (transition conditions)
- Directed links connecting the steps and transitions

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

Example of Instruction List language programming

Example of a function block:
sending the speed reference to the drive

Programming languages (continued)

Instruction List language (IL)

Instruction List language can be used to write Boolean equations and use all the functions available in the language. It can be used to represent the equivalent of a ladder diagram in text form.
Each instruction consists of an instruction code and a bit or word type operand.
As in Ladder language, instructions are organized in sequences of instructions called statements (equivalent to a rung).

Function block diagram (FBD)

FBD is a graphic language. It consists of function blocks connected by a rung.
The program is executed sequentially.
Each block can be a logical or arithmetical expression, a call to another function block, a jump or a return instruction.

Continuous Flow Chart (CFC)

Continuous Flow Chart programming is a graphic language. The rung connecting the various function blocks on the page is not necessarily sequential. The output of a function block may be looped back on its input or on the input of a block already inserted in the rung.

Function blocks

The PS 1131 software workshop has pre-programmed function blocks (standard library) and offers users the option of creating their own function blocks (user library).

Standard library

The standard library contains:
■ Logic functions (AND, OR, etc.)
■ Mathematical functions (Cos, Sin, Exp, etc.)
■ Function blocks dedicated to drives which simplify data exchanges between the drive and the "Controller Inside" programmable card (e.g. sending the speed reference)
■ Function blocks for managing the CANopen bus
■ Graphic terminal display function blocks.

User library

Users have the option of creating their own function blocks in order to structure their applications. This is also a means of protecting the know-how contained in the algorithms, as it is possible to lock access to the user function blocks program.

Telemecanique

41

Variable speed drives
for asynchronous motors
Altivar 61
Option: "Controller Inside" programmable card

Example of runtime screen

Debugging

The PS 1131 software workshop offers a complete set of tools for debugging the application.

Program execution for debugging

The main debugging functions are:
■ Use of breakpoints
■ Step-by-step program execution
■ Execution of a single cycle
■ Direct access to the subroutines that have been called (call stack).

Realtime program animation

The main functions of realtime animation of the program are:
■ Animation of part of the program in any language
■ Automatic display of a variables window relating to this part of the program

Animation tables

Tables containing variables for the application to be monitored can be created and saved.
In both these tools, in addition to animating the data, it is possible to:
■ Modify and force the value of data of any type
■ Change the display format (binary, hexadecimal, etc.).

Oscilloscope

The PS 1131 software workshop Oscilloscope function can be used to monitor up to 20 variables in the form of curves.

Runtime screens

A tool integrated in the PS 1131 software workshop can be used to design and use runtime screens for the application:
■ Creation of screen backgrounds
■ Animation of graphic objects associated with variables
■ Display of messages
■ …

Simulation

The PS 1131 software workshop Simulation function can be used to test the program without having to set up the drive.

Altivar 61
Communication buses and networks

Example of configuration on the CANopen bus

Presentation

The Altivar 61 drive is designed to suit all configurations found in communicating industrial installations.

It includes Modbus and CANopen communication protocols as standard.

The Modbus protocol can be accessed directly by means of 2 integrated communication ports (for characteristics, see page 15):
■ One RJ45 Modbus terminal port **1**, located on the drive front panel, for connecting:
□ The remote graphic display terminal
□ A Magelis industrial HMI terminal
□ The PowerSuite software workshop
■ One RJ45 Modbus network port **2**, located on the drive control terminals. It is dedicated to control and signalling by a PLC or other type of controller.
It can also be used to connect a terminal or the PowerSuite software workshop.

The CANopen protocol can be accessed from the Modbus network port via the CANopen adapter **3** (for characteristics, see page 15). In this case, terminal port **1** must be used to access the Modbus protocol.

By means of the addition of one of the 11 optional communication cards, the Altivar 61 drive can also be connected to other communication buses and networks used in different fields, for example in industrial applications or in building management systems (HVAC) *(1)*.

Communication cards for industrial applications:
■ Ethernet TCP/IP
■ Modbus/Uni-Telway: This card provides access to additional functions to complement those of the integrated, Modbus ASCII and 4-wire RS 485 ports
■ Fipio
■ Modbus Plus
■ Profibus DP
■ DeviceNet
■ INTERBUS

Communication cards for building management systems (HVAC):
■ LONWORKS,
■ METASYS N2
■ APOGEE FLN
■ BACnet

The option of powering the control part separately enables communication to be maintained (monitoring, diagnostics) even if there is no power supply to the power part.

The main Altivar 38 drive communication functions are compatible with the Altivar 61 drive *(2)*:
- Connection
- Communication services
- Drive behaviour (profile)
- Control and monitoring parameters
- Standard adjustment parameters

The PowerSuite software workshop can be used to port configurations from the Altivar 38 drive to the Altivar 61 drive.

Functions

Variable speed drives
for asynchronous motors
Altivar 61
Communication buses and networks

Functions

All the drive functions can be accessed via the network:
■ Control
■ Monitoring
■ Adjustment
■ Configuration

If the drive is equipped with a "Controller Inside" programmable card or a multi-pump card, its variables (% MW, etc.) can be accessed using the Modbus message handling services via the integrated communication ports or the Ethernet TCP/IP communication card.

The speed command and reference may come from different control sources:
■ I/O terminals
■ Communication network
■ "Controller Inside" programmable card
■ Multi-pump cards
■ Remote graphic display terminal
The advanced functions of the Altivar 61 drive can be used to manage switching of these drive control sources according to the application requirements.

It is possible to choose the assignment of the communication periodic variables using:
■ The network configuration software (Sycon, etc.)
■ The Altivar 61 drive communication scanner function

For the integrated Modbus and CANopen ports and for the communication cards for industrial applications, the Altivar 61 drive can be controlled:
■ According to the CiA DSP 402 (Drivecom) profile
■ According to the I/O profile where control is as simple and adaptable as control via the I/O terminals
The DeviceNet card also supports the ODVA AC Drive and Allen-Bradley drive profiles.

Communication is monitored according to criteria specific to each protocol. However, regardless of the protocol, it is possible to configure how the drive responds to a communication fault:
■ Freewheel stop, stop on ramp, fast stop or braked stop
■ Maintain the last command received
■ Fallback position at a predefined speed
■ Ignore the fault

A command from the CANopen bus is processed with the same priority as one of the drive terminal inputs. This results in excellent response times on the network port via the CANopen adaptor.

Variable speed drives

Communication buses and networks

Characteristics of the VW3 A3 310 Ethernet TCP/IP card *(1)*

Structure	Connector	One RJ45 connector
	Transmission speed	10/100 Mbps, half duplex and full duplex
	IP addressing	■ Manual assignment via the display terminal or the PowerSuite software workshop ■ BOOTP (IP address dynamic server depending on the IEEE address) ■ DHCP (address dynamic server depending on the Device Name) with automatic reiteration
	Physical	Ethernet 2
	Link	LLC: IEEE 802.2 MAC: IEEE 802.3
	Network	IP (RFC791) ICMP client for supporting certain IP services such as the "ping" command
	Transport	TCP (RFC793), UDP The maximum number of connections is 8 (port 502)
Services	Transparent Ready *(2)* class	C20
	Web server	Simultaneous access via 3 Web browsers (more, according to the number of connections used) Server factory-configured and modifiable The memory available for the application is approximately 1 MB The factory-configured server contains the following pages: ■ Altivar viewer: displays the drive status and the state of its I/O, the main measurements (speed, current, etc) ■ Data editor: access to the drive parameters for configuration, adjustment and signalling ■ Altivar chart: simplified oscilloscope function ■ Security: configuration of passwords to access viewing and modification ■ FDR Agent: configuration of the "Faulty Device Replacement" parameters ■ IO Scanner: configuration of periodic variables for controlling and monitoring the drive via the PLC, etc. ■ Ethernet statistics: drive identification (IP addresses, version, etc.) from the Ethernet transmission statistics
	Messaging	Read Holding Registers (03), 63 words maximum Read Input Registers (04), 63 words maximum Write Single Register (06) Write Multiple Registers (16), 63 words maximum Read/Write Multiple Registers (23) Read Device Identification (43) Diagnostics (08)
	Periodic variables	I/O scanning service (can be inhibited): ■ 10 control variables which can be assigned by the PowerSuite software workshop or the standard Web server ■ 10 monitoring variables which can be assigned by the PowerSuite software workshop or the standard Web server The Global Data service is not supported
	Functional profiles	CiA DSP 402: "Device Profile Drives and Motion Control" I/O profile
	Network management	SNMP
	File transfer	FTP for Web server and TFTP for FDR
	FDR (Faulty Device Replacement)	Yes
	Communication monitoring	Can be inhibited Time out can be set between 0.5 and 60 s via the terminal, the PowerSuite software workshop or the standard Web server
Diagnostics	Using LEDs	5 LEDs on the card: "RX" (reception), "TX" (transmission), "FLT" (Ethernet fault), "STS" (IP address) and "10/100" Mbps (speed)
	Using the graphic display terminal	Control word received Reference received
	Via the Web server	Number of frames received Number of incorrect frames

(1) For Ethernet TCP/IP network, see pages 182 to 187.
(2) Please consult our "Ethernet TCP/IP Transparent Ready" catalogue.

Characteristics (continued)

Variable speed drives
for asynchronous motors
Altivar 61
Communication buses and networks

Characteristics of the VW3 A3 303 Modbus/Uni-Telway card

Structure	Connector	One 9-way female SUB-D connector
	Transmission speed	Configurable via the display terminal or the PowerSuite software workshop: ■ 4800 bps ■ 9600 bps ■ 19200 bps
	Polarization	Type of polarization can be configured using switches on the card: ■ No polarization impedances (supplied by the wiring system, for example, in the master) ■ Two 4.7 kΩ polarization resistors
	Selection of the protocol	Via the display terminal or the PowerSuite software workshop: ■ Modbus RTU ■ Modbus ASCII ■ Uni-Telway
Services	Functional profiles	CiA DSP 402: "Device Profile Drives and Motion Control" I/O profile
	Communication monitoring	Can be inhibited Fixed time out: 10 s
Diagnostics	Using LEDs	2 LEDs on the card: "RUN" (status) and "ERR" (fault)
	Using the graphic display terminal	Control word received Reference received

Characteristics of the Modbus protocol (1)

Structure	Physical interface	2-wire RS 485, 4-wire RS 485
	Transmission mode	RTU, ASCII
	Format	Configurable via the display terminal or the PowerSuite software workshop: In RTU mode only: ■ 8 bits, odd parity, 1 stop ■ 8 bits, no parity, 1 stop ■ 8 bits, even parity, 1 stop ■ 8 bits, no parity, 2 stop In RTU and ASCII modes: ■ 7 bits, even parity, 1 stop ■ 7 bits, odd parity, 1 stop ■ 7 bits, even parity, 2 stop ■ 7 bits, odd parity, 2 stop
	Address	1 to 247, configurable using switches on the card.
Service	Messaging	Read Holding Registers (03), 63 words maximum Read Input Registers (04), 63 words maximum Write Single Register (06) Write Multiple Registers (16), 61 words maximum Read/Write Multiple Registers (23) Read Device Identification (43) Diagnostics (08)

Characteristics of the Uni-Telway protocol (2)

Structure	Physical interface	2-wire RS 485
	Format	8 bits, odd parity, 1 stop
	Address	1 to 147, configurable using switches on the card.
Service	Messaging	Read word (04h) Write word (14h) Read object (36h), 63 words maximum Write object (37h), 60 words maximum Identification (0Fh) Protocol version (30h) Mirror (FAh) Read error counters (A2h) Reset counters (A4h)

(2) For the Uni-Telway bus, see pages 200 and 201.

Characteristics (continued)

Variable speed drives
for asynchronous motors
Altivar 61
Communication buses and networks

Characteristics of the VW3 A3 311 Fipio card (1)

Structure	Connector	One 9-way male SUB-D connector
	Transmission speed	1 Mbps
	Address	1 to 62, configurable using switches on the card
Services	Adjustment using PLC software (Unity, PL7)	No
	Periodic variables	8 control variables which can be assigned by communication scanner 8 monitoring variables which can be assigned by communication scanner PKW indexed periodic variable (settings)
	Communication profile	FED C 32
	Functional profiles	CiA DSP 402: "Device Profile Drives and Motion Control" I/O profile
	Communication monitoring	Can be inhibited Fixed time out: 256 ms
Diagnostics	Using LEDs	4 LEDs on the card: "RUN" (status), "ERROR" (fault), "COM" (data exchange) and "I/O" (initialization)
	Using the graphic display terminal	Control word received Reference received Periodic variables (communication scanner)

Characteristics of the VW3 A3 302 Modbus Plus card (2)

Structure	Connector	One 9-way female SUB-D connector
	Transmission speed	1 Mbps
	Address	1 to 64, configurable using switches on the card
Services	Messaging	Yes (Modbus)
	Periodic variables	"Peer Cop": 8 control variables which can be assigned by communication scanner "Global data": 8 monitoring variables which can be assigned by communication scanner
	Functional profiles	CiA DSP 402: "Device Profile Drives and Motion Control" I/O profile
	Communication monitoring	Can be inhibited Time out can be set between 0.1 and 60 s via the terminal or the PowerSuite software workshop.
Diagnostics	Using LEDs	1 LEDs on the card: "MB+" (status)
	Using the graphic display terminal	Control word received Reference received Periodic variables (communication scanner)

(5) Harsh environments:
    - Resistance to hydrocarbons, industrial oils, detergents and solder splashes
    - Relative humidity up to 100%
    - Saline atmosphere
    - Significant temperature variations
    - Operating temperature between -10°C and +70°C

Variable speed drives
for asynchronous motors
Altivar 61
Option: resistance braking units

Presentation

Resistance braking enables the Altivar 61 drive to operate while braking to a standstill or during "generator" operation, by dissipating the energy in the braking resistor.

The ATV 61H●●●M3, ATV 61H●●●M3X, ATV 61H075N4…HC22N4, ATV 61W●●●N4 and ATV 61W●●●N4C drives have a built-in dynamic brake transistor.

For ATV 61HC25N4…HC63N4 drives, a braking unit must be used. It is controlled by the drive:
■ For ATV 61HC25N4 and ATV 61HC31N4 drives, the braking unit is mounted directly on the left-hand side of the drive, see dimensions on page 91
■ For ATV 61HC40N4...HC63N4 drives, the braking unit is an external module, see dimensions on page 101.

Application
Machines with high inertia.

Characteristics

Type of braking unit			VW3 A7 101	VW3 A7 102
Ambient air temperature around the device	Operation	°C	- 10…+ 50	
	Storage	°C	- 25…+ 70	
Degree of protection of enclosure			IP 20	
Degree of pollution			2 according to standard EN 50178	
Relative humidity			Class 3K3 without condensation	
Maximum operating altitude		m	2000	
Vibration resistance			0.2 gn	
Nominal voltage of line supply and drive supply (rms value)		V	$\sim$ 380 - 15%…480 + 10%	
Engage threshold		V	$=$ 785 ± 1%	
Maximum DC bus voltage		V	850	
Maximum braking power on 400 V $\sim$ supply	785 V $=$ (1)	kW	420	750
Percentage of conduction time at constant power at 785 V $=$			5 % at 420 kW	5 % at 750 kW
			15% at 320 kW	15% at 550 kW
			50 % at 250 kW	50 % at 440 kW
Cycle time		s	≤ 240	
Maximum continuous power		kW	200	400
Thermal protection			Integrated, via thermal probe	
Forced ventilation		m³/h	100	600
Installation			Vertical	
Minimum resistor value to be associated with the braking unit		Ω	1.05	0.7

Note: *To increase the braking power, several resistors can be mounted in parallel on the same braking unit. In this case, do not forget to take the minimum resistance value on each unit into account, see Characteristics on page 54.*

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Option: braking resistors

Presentation

The braking resistor enables the Altivar 61 drive to operate while braking to a standstill, by dissipating the braking energy.
It enables maximum transient braking torque.
The resistors are designed to be mounted on the outside of the enclosure, but should not inhibit natural cooling. Air inlets and outlets must not be obstructed, even partially. The air must be free of dust, corrosive gas and condensation.

Application

Inertia machines.

General characteristics

Type of braking resistor			VW3 A7 701…709	VW3 A7 710…718
Ambient air temperature around the device	Operation	**°C**	0…+ 50	
	Storage	**°C**	- 25…+ 70	
Degree of protection of enclosure			IP 20	IP 23
Thermal protection			Via temperature controlled switch or via the drive	Via thermal overload relay
Temperature controlled switch (1)	Tripping temperature	**°C**	120	–
	Max. voltage - max. current		250 V $\sim$ -1 A	–
	Min. voltage - min. current		24 V $=$ -0.1 A	–
	Maximum contact resistance	**mΩ**	60	–
Load factor for the dynamic brake transistors			The internal circuits of Altivar 61 drives rated 220 kW or less have a built-in dynamic brake transistor.	
	ATV 61H●●●M3, ATV 61H●●●M3X, ATV 61H075N4…HD75N4, ATV 61W075N4…WD90N4, ATV 61W075N4C…WD90N4C		The dynamic brake transistor is designed so that it can tolerate 120% of the nominal motor power for 60 s.	
	ATV 61HD90N4…HC22N4		The dynamic brake transistor is designed so that it can tolerate 110 % of the nominal motor power for 60 s.	

Connection characteristics

Type of terminal			Drive connection	Temperature-controlled switch
Maximum wire size	VW3 A7 701…703		4 mm^2 (AWG 28)	1.5 mm^2 (AWG 16)
	VW3 A7 704…709		Bar connection, M6	2.5 mm^2 (AWG 14)
	VW3 A7 710…718		Bar connection, M10	–

Minimum ohmic value of the resistors to be associated with the Altivar 61 drive, at 20°C (2)

(1) The contact should be connected in the sequence (use for signalling, or in the line contactor control).
(2) The minimum ohmic value is determined at a temperature of 20°C. In an environment where the temperature is below 20°C, make sure that the minimum ohmic value recommended in the table is followed.

(1) Load factor for resistors: the value of the average power that can be dissipated at 50 °C from the resistor into the casing is determined for a load factor during braking that corresponds to the majority of normal applications.
(2) The braking resistors' degree of protection is IP 20 or IP 23.

Variable speed drives
for asynchronous motors
Altivar 61
Option: braking units and resistors

Determining the braking unit and resistor

Calculating the various braking powers makes it possible to determine the braking unit and the braking resistor.

Operation

The braking power during deceleration is characterized by a peak power $\hat{P}_b$ obtained at the start of deceleration, which decreases to 0 in proportion to the speed.
Example: Stopping centrifuges, translational movement, change of direction, etc.

n_1	Motor speed	[rpm]
T_l	Load torque	[Nm]
T_b	Braking torque	[Nm]
$\hat{P}_b$	Peak braking power	[W]
$\bar{P}_b$	Average braking power during t_b	[W]
t_b	Braking time	[s]

Calculating the braking time from the inertia

$$t_b = \frac{J \cdot \omega}{T_b + T_r}$$

$$\omega = \frac{2\pi \cdot n}{60}$$

$$T_b = \frac{\Sigma J \cdot (n_1 - n_2)}{9,55 \cdot t_b}$$

$$\hat{P}_b = \frac{T_b \cdot n_1}{9,55}$$

$$\bar{P}_b = \frac{\hat{P}_b}{2}$$

T_b	Motor braking torque	[Nm]
ΣJ	Total inertia applied to the motor	[kgm^2]
n_1	Motor speed ahead of gearbox	[rpm]
n_2	Motor speed after gearbox	[rpm]
t_b	Braking time	[s]
P_b	Peak braking power	[W]
$\bar{P}_f$	Average braking power during time t_b	[W]
T_r	Resistive torque	[Nm]

$$\Sigma J = J_{motor} + J_{applied}$$

$$i = \frac{n_1}{n_2}$$

$$J_{applied} \qquad \frac{J_{machine}}{i^2}$$

Altivar 61: Reduction of current harmonics
Option: DC chokes

The main solutions for reducing current harmonics are as follows:
■ DC chokes, see below
■ Line chokes, see page 66
■ 16% and 10% passive filters, see page 69
■ Use of passive filters with a DC choke, see pages 69 to 73

These 4 solutions can be used on the same installation.
It is always easier and less expensive to handle current harmonics at installation level as a whole rather than at the level of each individual unit, particularly when using passive filters and active compensators.

DC chokes

DC chokes are used to reduce current harmonics in order to comply with standard IEC/61000-3-2 for drives on which the line current is greater than 16 A and less than 75 A.
Using the DC choke with the drive complies with draft standard IEC/61000-3-12 provided that the RSCE ⩾ 120 *(1)* at the point of connection to the public network. 120 represents the minimum value of RSCE *(1)* for which the values in table 4 of draft standard IEC/61000-3-12 are not exceeded.
It is the responsibility of the installer or the user to ensure that the device is connected correctly to a connection point with an RSCE ⩾ 120.
The DC choke is connected to the drive power terminals.

It is supplied as standard with ATV 61HD55M3X, HD90M3X and
ATV 61HD90N4…HC63N4 drives and is integrated into ATV 61W●●●N4 and
ATV 61W●●●N4C drives.

Applications

Reduction of current harmonics.
Reduction of THD to 5% or to 10% in association with passive filters, see pages 69 to 73.
Maintaining the motor torque in relation to the DC choke.

(1) For ATV 61HD55M3X…HD90M3X, ATV 61HD90N4…HC63N4 drives, the choke is supplied as standard with the drive.
It is integrated into ATV 61W●●●N4 and ATV 61W●●●N4C drives.

Presentation

Variable speed drives
for asynchronous motors
Altivar 61: Reduction of current harmonics
Option: Line chokes

Line chokes

A line choke can be used to provide improved protection against overvoltages on the line supply and to reduce the current harmonics produced by the drive.

Line chokes are compulsory on ATV 61HU40M3…HU75M3 drives supplied with a single phase 200…240 V 50/60 Hz supply voltage.

They can be used instead of a DC choke. In this case, to order an ATV 61HD55M3X…HD90M3X and ATV 61HD90N4…HC63N4 drive without DC choke, add the letter D to the end of the drive's reference, see pages 18 and 19.

The recommended chokes can be used to limit the line current.
They have been developed in line with standard EN 50178 (VDE 0160 level 1 high energy overvoltages on the line supply).

The inductance values are defined for a voltage drop between phases of between 3% and 5% of the nominal line voltage. Values higher than this will cause loss of torque.

These chokes should be installed upstream of the drive.

Applications

The use of line chokes is recommended in particular under the following circumstances:
■ Close connection of several drives in parallel
■ Line supply with significant disturbance from other equipment (interference, overvoltages)
■ Line supply with voltage imbalance between phases above 1.8% of the nominal voltage
■ Drive supplied by a line with very low impedance (in the vicinity of a power transformer 10 times more powerful than the drive rating)
■ Installation of a large number of frequency converters on the same line
■ Reduction of overload in cos φ correction capacitors, if the installation has a power factor correction unit

Variable speed drives
for asynchronous motors
Altivar 61: Reduction of current harmonics
Option: Passive filters

Passive filters

Passive filter

The passive filter is used to reduce current harmonics with total harmonic distortion factors of less than 16% or 10%. These ratios may be less than 10% or 5% if the filter is used with a DC choke, see pages 62 and 70 to 73.
For applications requiring stricter control of current harmonics, the filter can be controlled via the drive on the basis of the load, see page 122.

Applications
Reduction of current harmonics in order to use drives in the first environment.

General characteristics

Degree of protection			IP 20
Maximum relative humidity			Class F humidity without condensation 5%…85%
Ambient air temperature around the device	Operation	°C	5…+ 40 without derating Up to 55°C with current derating of 3% per additional °C
	Storage	°C	- 25…+ 55
Maximum operating altitude		m	1000 without derating 1000…4000 with current derating of 5% per additional 1000 m

Electrical characteristics

Range		400 V	460 V
Nominal voltage ± 10%	V	380…415 $\sim$	440…480 $\sim$
Operating frequency		50 ± 5 %	60 ± 5 %
Overload capacity		1.5 x Irms (A)	
Efficiency		98 % (2% of thermal losses)	
THDI (1)	%	≤ 16	
Cos φ		At 75% of the line current: 0.85 At 100% of the line current: 0.99 At 150% of the line current: 1	

Connection characteristics

Maximum connection capacity	VW3 A4 601…604		16 mm²
	VW3 A4 605…609		50 mm²
	VW3 A4 610, 611, 614		Connected on a bar, Ø 12.5
	VW3 A4 612, 613, 615…617		Connected on a bar, Ø 16.5
	VW3 A4 618		Connected on a bar, Ø 16.5
	VW3 A4 621, 622		16 mm²
	VW3 A4 623…627		50 mm²
	VW3 A4 628, 629		Connected on a bar, Ø 12.5
	VW3 A4 630…637		Connected on a bar, Ø 16.5
	VW3 A4 638		Connected on a bar, Ø 16.5
	VW3 A4 641…644		16 mm²
	VW3 A4 645…648		50 mm²
	VW3 A4 649		Connected on a bar, Ø 12.5
	VW3 A4 650…655		Connected on a bar, Ø 16.5
	VW3 A4 656		Connected on a bar, Ø 16.5
	VW3 A4 661…663		16 mm²
	VW3 A4 664…666		50 mm²
	VW3 A4 667, 668		Connected on a bar, Ø 12.5
	VW3 A4 669…675		Connected on a bar, Ø 16.5
	VW3 A4 676		Connected on a bar, Ø 16.5

(1) The total current harmonic distortion (THDI) is indicated for a total voltage harmonic distortion (THDU) < 2% and a short-circuit ratio (RSCE) > 66%, and only for the nominal current of the passive filter. If these conditions are not adhered to, the total current harmonics will be reduced without any guarantee of level.

Integrated filters

The Altivar 61 drive, except for the ATV 61H●●●M3X, has built-in radio interference input filters to meet the EMC standard for variable speed electrical power drive "products" IEC/EN 61800-3, edition 2, category C2 or C3 in environment 1 or 2 and to comply with the European directive on EMC (electromagnetic compatibility).

ATV 61W●●●N4C	80	50	20	5

Additional EMC input filters

Applications

Additional EMC input filters can be used to meet more stringent requirements and are designed to cut down conducted emissions on the line supply below the limits of standard EN 55011 group 1, class A or B (2).
For the ATV 61H●●●M3, ATV 61HD11M3X...HD45M3X and
ATV 61H075N4...HD75N4 drives, the additional EMC filters can be mounted next to or under the device. They act as a support for the drives and are attached to them via tapped holes.
For the ATV61HD90N4…HC63N4 drives, the additional EMC filters are only mounted at the side of the drives.

Use according to the type of network

Use of these additional filters is only possible on TN (neutral connection) and TT (neutral to earth) type networks.

Standard IEC/EN 61800-3, appendix D2.1, states that on IT networks (impedance or isolated neutral), filters can cause permanent insulation monitors to operate in a random manner.
In addition, the effectiveness of additional filters on this type of network depends on the type of impedance between neutral and earth, and therefore cannot be predicted.
In the case of a machine which needs to be installed on an IT network, one solution consists of inserting an isolation transformer and placing the machine locally on a TN or TT network.

(1) Maximum lengths for shielded cables connecting motors to drives, for a factory-set switching frequency of 2.5 or 4 kHz, depending on the rating (see page 10). If motors are connected in parallel, it is the total length that should be taken into account.
(2) See page 8.
(3) LF: low switching frequency. HF: high switching frequency.
These frequencies depend on the drive rating.

Variable speed drives
for asynchronous motors
Altivar 61: Output filters

The Altivar 61 drive includes as standard a software function used to limit overvoltages at the motor terminals.
Depending on the cable lengths or the type of application, it may be necessary to use output filters:
■ Motor chokes used to limit the dv/dt
■ Sinus filters that are particularly effective for long cable runs

Cable length *(2)*	10…50 m	50…100 m	100…150 m	150…300 m	300…600 m	600…1000 m
Shielded cable						
ATV 61H●●●M3 ATV 61H075N4…HD15N4	Software function *(1)*	Motor choke	–			
ATV 61H●●●M3X ATV 61HD18N4…HC63N4	Software function *(1)*		Motor choke	–		
Unshielded cable						
ATV 61H075M3, HU15M3 ATV 61H075N4…HU22N4	Software function *(1)*		Motor choke or sinus filter	–		
ATV 61HU22M3...HU30M3 ATV 61HU30N4…HU55N4	Software function *(1)*		Motor choke		Sinus filter	–
ATV 61HU40M3…HU75M3 ATV 61HU75N4…HD15N4	Software function *(1)*		Motor choke		Sinus filter	
ATV 61HD11M3X…HU45M3X ATV 61HU18N4…HD75N4	Software function *(1)*			Motor choke	Sinus filter	
ATV 61HD55M3X…HD90M3X ATV 61HD90N4…HC63N4	Software function *(1)*			Motor choke	2 motor chokes connected in series	–

(1) The software function limits the overvoltage at the motor terminals to twice the DC bus voltage.
For any application with braking cycles, the DC bus voltage rises to more than the supply voltage multiplied by $\sqrt{2}$.
You must check the electrical characteristics of the motor before using this function.
(2) For an application with several motors connected in parallel, the cable length must include all tap-offs.
Recommended cable types:
■ Shielded cables: "GORSE" cable, type GUOSTV-LS/LH; "PROTOFLEX" cable, type EMV2 YSL CY,
■ Unshielded cables: "GORSE" cable, type H07 RN-F4GXX; "BELDEN" cable, type 2950X

Ⓣ **Telemecanique**

Variable speed drives
for asynchronous motors
Altivar 61: Output filters
Option: Motor chokes

Motor chokes

Altivar 61 drives have been designed for operation with the following maximum motor cable lengths:

For drives	Maximum length of motor cable (1)	
	Shielded cable	Unshielded cable
	m	m
ATV 61H●●●M3 ATV 61HD11M3X, HD15M3X ATV 61H075N4…HD18N4	⩾ 50	⩾ 100
ATV 61HD18M3X…HD90M3X ATV 61HD22N4…HC63N4	⩾ 100	⩾ 200

The motor choke enables operation beyond these motor cable length limits and/or can limit the dv/dt to 500 V/µs at the motor terminals.

It also enables:
■ Overvoltages on the motor terminals to be limited as follows:
□ 1000 V to 400 V ∿ (rms value)
□ 1150 V to 460 V ∿ (rms value)
■ Interference caused by opening a contactor placed between the filter and the motor to be filtered
■ The motor earth leakage current to be reduced

General characteristics (2)

	Maximum voltage	V	250 ∿	–
	Maximum current	A	0.5	–
Ambient air temperature around the device	Operation	°C	- 10…+ 50	
	Storage	°C	- 25…+ 70	

Connection characteristics

Maximum connection capacity and tightening torque	VW3 A5 101, 102		10 mm² (AWG 6) 1.5 Nm
	VW3 A5 103		Connected on a bar, Ø 11 mm –
	VW3 A5 104		Connected on a tag connector, M10 –
	VW3 A5 105, 106		Connected on a tag connector, M12 –
	VW3 A5 107, 108		Connected on a tag connector, 2 x M12 –

(1) These values are given for a maximum switching frequency of 2.5 or 4 kHz depending on the rating.
(2) Choke performance is ensured by not exceeding the cable lengths between the motor and the drive given in the table above. For an application with several motors connected in parallel, the cable length must include all tap-offs. If a cable longer than that recommended is used, the motor chokes may overheat.
(3) The contact should be connected in sequence (used for signalling or controlling the line contactor).

Variable speed drives
for asynchronous motors
Altivar 61: Output filters
Option: Sinus filters

Sinus filters

Sinus filter

Sinus filters allow Altivar 61 drives to operate with longer motor cables
(up to 1000 m).
For ATV 61H●●●M3, ATV 61HD11M3X...HD45M3X, ATV 61HU15N4... HD75N4
drives, they also enable the use of unshielded cables whilst maintaining compliance
with the standards governing radiated EMC emissions (EN 55011 class A Gr 1).

Applications

For ATV 61H●●●M3, ATV 61HD11M3X...HD45M3X, ATV 61HU15N4... HD75N4
drives, applications requiring:
■ Long cable runs
■ Mechanical restrictions preventing the use of shielded cables
■ An intermediate transformer between the drive and the motor
■ Motors connected in parallel

For ATV 61HD55M3X...HD75M3X and ATV 61HD90N4...HC63N4 drives,
applications requiring:
■ An intermediate transformer between the drive and the motor

Degree of pollution			2 conforming to standard EN 50178	
Vibration resistance			1.5 mm from 3...13 Hz, 1 gn from 13...200 Hz, conforming to IEC 60068-2	
Shock resistance			15 gn for 11 ms conforming to IEC 60068-2-27	
Maximum relative humidity			95%	
Ambient air temperature around the device	Operation	°C	-10...+40 without derating 40...50°C with current derating of 1.5% per additional °C	
	Storage	°C	- 40…+ 65	
Maximum operating altitude		m	1000 without derating 1000…3000 with current derating of 1% per additional 100 m	
Switching frequency		kHz	4...8	
Output frequency		Hz	0...100	
Voltage drop			< 10%	
Maximum voltage		V	500 ∿	
Maximum current			1.5 x nominal current for 60 s	
Maximum motor cable length	Unshielded cable	m	600 or 1000 depending on the drive rating, see page 78	

Connection characteristics

Maximum connection capacity and tightening torque	VW3 A5 201		4 mm² (AWG 10) 0.6 Nm	
	VW3 A5 202		6 mm² (AWG 8) 1.5 Nm	
	VW3 A5 203		10 mm² (AWG 6) 1.5 Nm	
	VW3 A5 204		25 mm² (AWG 2) 4 Nm	
	VW3 A5 205		50 mm² (AWG 0) 6 Nm	
	VW3 A5 206, 207		95 mm² (AWG 4/0) 20 Nm	
	VW3 A5 208, 209		Connected on a bar, Ø 11 mm –	
	VW3 A5 210		Connected on a bar, Ø 14 mm –	
	VW3 A5 211		Connected on a bar, 4 x Ø 11 mm –

Variable speed drives for asynchronous motors
Altivar 61
Safety requirements

"Power Removal" safety function

The Altivar 61 drive integrates the "Power Removal" safety function which prohibits unintended equipment operation. The motor no longer produces torque.

This safety function:
■ conforms to machine safety standard EN 954-1, category 3
■ conforms to operational safety standard IEC/EN 61508, capacity SIL2 (safety control-signalling applied to processes and systems)
The SIL (Safety Integrity Level) capacity depends on the connection diagram for the drive and for the safety function. Failure to follow the setup recommendations could inhibit the SIL capacity of the "Power Removal" safety function.
■ conforms to draft product standard IEC/EN 61800-5-2 for both stop functions:
□ Safe Torque Off ("STO")
□ Safe Stop 1 ("SS1")

The "Power Removal" safety function has a redundant electronic architecture *(1)* which is monitored continuously by a diagnostics function.

This SIL2 and category 3 level of safety function is certified as conforming to these standards by the INERIS certification body under a program of voluntary certification.

Categories relating to safety according to EN 954-1

Categories	Main safety basis	Control system requirements	Behaviour in the event of a fault
B	Selecting components which conform to the relevant standards	Monitoring in accordance with established practice	Possible loss of safety function
1	Selecting components and safety principles	Use of tested components and tested safety principles	Possible loss of safety function with a lower probability than in **B**
2	Selecting components and safety principles	Test per cycle. The intervals between tests must be appropriate to both the machine and its application	Fault detected on each test
3	Structure of the safety circuits	A single fault should not result in loss of the safety function. The fault must be detected if this is reasonably possible	Safety function assured except in the event of an accumulation of faults
4	Structure of the safety circuits	A single fault should not result in loss of the safety function. The fault must be detected when or before the safety function is next invoked. An accumulation of faults should not result in loss of the safety function.	Safety function always assured

The machine manufacturer is responsible for selecting the safety category.
The category depends on the level of risk factors given in standard EN 954-1.

Safety Integrity Levels (SIL) according to standard IEC/EN 61508

SIL1 according to standard IEC/EN 61508 is comparable with category 1 according to EN 954-1 (SIL1: mean probability of undetected dangerous failure per hour between 10^{-5} and 10^{-6}).
SIL2 according to standard IEC/EN 61508 is comparable with category 3 according to EN 954-1 (SIL 2: mean probability of undetected dangerous failure per hour between 10^{-6} and 10^{-7}).

(1) Redundant: consists of mitigating the effects of failure of one component by means of the correct operation of another, assuming that faults do not occur simultaneously on both.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61
Safety requirements

"Power Removal" safety function considerations

The "Power Removal" safety function cannot be considered as a means of electrical disconnection of the motor (no electrical isolation); if necessary, a Vario switch disconnector must be used.

The "Power Removal" safety function is not designed to overcome any malfunction in the drive process control or application functions.

The output signals available on the drive must not be considered as safety signals (example: "Power Removal" active); these are Preventa-type safety module outputs which must be integrated into a safety control-signalling circuit.

The schemes on the following pages take into account conformity with standard IEC/EN 60204-1 that defines 3 stop categories:
■ Category 0: stopping by immediate removal of the power from the actuators (example: uncontrolled stop)
■ Category 1: controlled stop maintaining the power on the actuators until the machine stops, then cutting off the power when the actuators stop as a result of the machine stopping
■ Category 2: controlled stop maintaining the power on the actuators

Connection schemes and applications

Conformity with category 1 of standard EN 954-1 and level SIL1 according to standard IEC/EN 61508

Use of the connection schemes on pages 114 and 115 which use a line contactor or a Vario switch disconnector between the drive and the motor. In this case, the "Power Removal" safety function is not used and the motor stops in accordance with category 0 of standard IEC/EN 60204-1.

Conformity with category 3 of standard EN 954-1 and level SIL2 according to standard IEC/EN 61508

The connection diagrams use the "Power Removal" safety function of the Altivar 61 drive combined with a Preventa safety module to monitor the Emergency stop circuits.

Machines with short freewheel stopping times (low inertia, see page 116).
When the activation command is given on the PWR input with the controlled motor, the motor power supply is immediately switched off and the motor stops according to category 0 of standard IEC/EN 60204-1.
Restarting is not permitted ("STO") if the activation command is given after the motor has come to a complete stop.
This safe stop is maintained while the PWR input remains activated.

Machines with long freewheel stopping times (high inertia, see page 117).
When the activation command is given, deceleration of the motor controlled by the drive is first requested, then, following a time delay controlled by a Preventa-type fault relay which corresponds to the deceleration time, the "Power Removal" safety function is activated by the PWR input. The motor stops according to category 1 of standard IEC/EN 60204-1 ("SS1").

Periodic test
The "Power Removal" safety input must be activated at least once a year for preventive maintenance purposes. The drive power supply must be switched off and then on again before carrying out this preventive maintenance. If during testing the power supply to the motor is not switched off, safety integrity is no longer assured for the "Power Removal" safety function. The drive must therefore be replaced to ensure the operational safety of the machine or of the system process.

Connection diagrams for several drives in parallel on the DC bus

Drives with different ratings

Reference	Description
A1	ATV 61 drive, see pages 18 to 21. Drive power = ∑ motor power ratings M1 + M2 + M3 + M4 +…
A2, A3, A4	ATV 61 drives powered by the DC bus. They must be protected using fast-acting fuses. Contactors on the DC circuit are ineffective as the switching action may cause the fuses to blow owing to the high load current.
F1	Fast-acting fuses, see page 125. Drive A1 powered by the AC supply with an output bus. The function of the fuse is to protect the internal diode bridge in the event of a short-circuit on the external DC bus.
F2, F3, F4	Fast-acting fuses, see page 125. Drives A2 and A3 are powered by their DC bus and are not connected to the AC input. The function of the fuses is to protect the DC bus wiring in the event of a drive short-circuit.

(1) With ATV 61HD90M3X and ATV 61HC11N4…HC63N4 drives, make provision for connection of the fans' power supply.

Drives with equivalent ratings

Reference	Description
A1, A2, A3	ATV 61 drives, see pages 18 to 21. The power difference between the drives connected in parallel must not exceed any rating.
F1, F2, F3	Fast-acting fuses, see page 125. Drives A1, A2 and A3 powered by the AC supply with an output bus. The function of the fuse is to protect the internal diode bridge in the event of a short-circuit on the external DC bus.
KM1	When using a common line contactor, all the Altivar 61 drive load circuits operate in parallel and cannot therefore be overloaded.
L1, L2, L3	DC chokes, see page 65.
Q1, Q2, Q3	Circuit-breakers on the line supply side to protect drives against overloads. Use trip contacts on the "external fault" logic input or the line contactor. The line contactor must only be activated if all three circuit-breakers are closed, as otherwise there is a risk of damage to the drives

(1) DC chokes compulsory except for ATV 61HD55M3X…HD90M3X and ATV 61HD90N4…HC63N4 (these drives include a DC choke as standard).

Variable speed drives for asynchronous motors
Altivar 61
Electromagnetic compatibility

ATV 61H●●●M3, ATV 61HD11M3X, HD15M3X,
ATV 61H075N4…HD18N4

ATV 61HD18M3X…HD45M3X,
ATV 61HD22N4…HD75N4

ATV 61HD55M3X…HD90M3X,
ATV 61HD90N4…HC63N4

Connections to meet the requirements of EMC standards
Principle

■ Earths between drive, motor and cable shielding must have "high frequency" equipotentiality.

■ Use shielded cables with shielding connected to earth over 360° at both ends for the motor cable, the braking resistor cable and the control-signalling cables. Conduit or metal ducting can be used for part of the shielding length provided that there is no break in the continuity of the earth connections.

■ Ensure maximum separation between the power supply cable (line supply) and the motor cable.

Installation plan for ATV 61H●●●M3, ATV 61H●●●M3X, ATV 61H●●●N4 drives

1 Steel plate *(1)*, to be mounted on the drive (machine earth).
2 Altivar 61 UL Type 1/IP 20 drive.
3 Unshielded power supply wires or cable.
4 Unshielded wires for the output of the fault relay contacts.
5 Attach and earth the shielding of cables 6, 7 and 8 as close as possible to the drive:
   - strip the shielding,
   - attach the cable to the plate 1 by attaching the clamp to the stripped part of the shielding.
   The shielding must be clamped tightly enough to the metal plate to ensure good contact.
6 Shielded cable for connecting the motor
7 Shielded cable for connecting the control/signalling wiring.
   For applications requiring several conductors, use cables with a small cross-section (0.5 mm^2).
8 Shielded cable for connecting the braking resistor
   6, 7, 8, the shielding must be earthed at both ends.
   The shielding must be continuous and intermediate terminals must be placed in EMC shielded metal boxes.
9 Earth screw.

Note: The HF equipotential ground connection between the drive, motor and cable shielding does not remove the need to connect the PE protective conductors (green-yellow) to the appropriate terminals on each unit.
If using an additional EMC input filter, it should be mounted beneath the drive and connected directly to the line supply via an unshielded cable. Link 3 on the drive is then via the filter output cable.

(1) Plate supplied for ATV 61H●●●M3, ATV 61HD11M3X, HD45M3X and ATV 61H075N4…HD75N4 drives.
For ATV 61HD55M3X... HD90M3X and ATV 61HD90N4…HC31N4 drives, the plate is supplied with the UL Type 1 conformity kit or the IP 21 or IP 31 conformity kit, to be ordered separately, see pages 24 and 25.
For ATV 61HC40N4...HC63N4 drives the plate is supplied with the IP 31 conformity kit, to be ordered separately, see page 25.

Connections to meet the requirements of EMC standards (continued)

Installation plan for ATV 61W●●●N4, ATV 61W●●●N4C drives

1 Steel plate (machine earth)
2 Altivar 61 UL Type 12/IP 54 drive.
3 Unshielded power supply wires or cable.
4 Unshielded wires for the output of the fault relay contacts.
5 Attach and earth the shielding of cables **6**, **7** and **8** as close as possible to the drive:
   - strip the shielding,
   - Attach the shielded cable to the cable gland **9** ensuring it is fully in contact 360°,
   - fold back the shielding and clamp it between the ring and the body of the cable gland.
   According to the rating, the cable shielding **7** can be earthed by using a cable gland **5**, a clamp **5** or a cable clip **5**.
   The shielding must be clamped tightly enough to the metal plate to ensure good contact.
6 Shielded cable for connecting the motor
7 Shielded cable for connecting the control/signalling wiring.
   For applications requiring several conductors, use cables with a small cross-section (0.5 mm^2).
8 Shielded cable for connecting the braking resistor
   6, **7**, **8**, the shielding must be earthed at both ends.
   The shielding must be continuous and intermediate terminals must be placed in EMC shielded metal boxes.
9 Metal cable gland (not supplied) for cables **6**, **7** and **8**.
   Standard cable gland (not supplied) for cables **3** and **4**.

*Note: The HF equipotential ground connection between the drive, motor and cable shielding does not remove the need to connect the PE protective conductors (green-yellow) to the appropriate terminals on each unit.
If using an additional EMC input filter, it should be mounted beneath the drive and connected directly to the line supply via an unshielded cable. Link **3** on the drive is then via the filter output cable.*

Variable speed drives for asynchronous motors
Altivar 61
Motor starters: supply voltage 200…240 V

Applications

Circuit-breaker/contactor/drive combinations can be used to ensure continuous service of the installation with optimum safety.

The type of circuit-breaker/contactor coordination selected can reduce maintenance costs in the event of a motor short-circuit by minimizing the time required to make the necessary repairs and the cost of replacement equipment. The suggested combinations provide type 1 or type 2 coordination depending on the drive rating.

Type 2 coordination: A motor short-circuit will not damage the device or affect its settings. The motor starter should be able to operate once the electrical fault has been removed. The electrical isolation provided by the circuit-breaker will not be affected by the short-circuit. Welding of the contactor contacts is permissible if they can be separated easily.

Type 1 coordination: The electrical isolation provided by the circuit-breaker will not be affected by the incident and no other elements apart from the contactor are damaged as a result of the motor short-circuit.

The drive controls the motor, provides protection against short-circuits between the drive and the motor and protects the motor cable against overloads. The overload protection is provided by the drive's motor thermal protection. If this protection is removed, external thermal protection should be provided.
Before restarting the installation, the cause of the trip must be removed.

Variable speed drives
for asynchronous motors
Altivar 61
UL Type 1/IP 20 drives

Mounting recommendations

Depending on the conditions in which the drive is to be used, its installation will require certain precautions and the use of appropriate accessories.
Install the unit vertically:
■ Do not place it close to heating elements.
■ Leave sufficient free space to ensure that the air required for cooling purposes can circulate from the bottom to the top of the unit.

ATV 61H●●●M3, ATV 61HD11M3X…HD45M3X, ATV 61H075N4…HD75N4

Mounting types

■ Type A mounting

■ Type B mounting

■ Type C mounting

By removing the protective blanking cover from the top of the drive, the degree of protection for the drive becomes IP 20. The protective blanking cover may vary according to the drive model, see opposite.

Removing the protective blanking cover for:
**ATV 61H●●●M3, ATV 61HD11M3X, HD15M3X,
ATV 61HD075N4…HD18N4**

Removing the protective blanking cover for:
**ATV 61HD18M3X…HD45M3X,
ATV 61HD22N4…HD75N4**

UL Type 1/IP 20 drives

Specific recommendations for mounting in an enclosure (1)

Follow the mounting recommendations described on pages 138 to 143.
To ensure proper air circulation in the drive:
- Fit ventilation grilles.
- Ensure that there is sufficient ventilation. If there is not, install forced ventilation with a filter. The openings and/or fans must provide a flow rate at least equal to that of the drive fans (see page 147)
- Use special filters with IP 54 protection.
- Remove the blanking cover from the top of the drive, see page 138.

Power dissipated inside the enclosure (1)

Sealed metal enclosure (IP 54 degree of protection)

The drive must be mounted in a dust and damp proof enclosure in certain environmental conditions: dust, corrosive gases, high humidity with risk of condensation and dripping water, splashing liquid, etc.
This enables the drive to be used in an enclosure where the maximum internal temperature reaches 50°C.

Calculating the enclosure dimensions (1)

Maximum thermal resistance Rth (°C/W)

$$Rth = \frac{\theta - \theta e}{P}$$

θ = maximum temperature inside enclosure in °C
θe = maximum external temperature in °C
P = total power dissipated in the enclosure in W

Power dissipated by drive: see page 146 (mounting in an enclosure or flush-mounting in an enclosure).
Add the power dissipated by the other equipment components.

Useful heat dissipation surface of enclosure S (m²)

(sides + top + front panel if wall-mounted)

$$S = \frac{K}{Rth}$$

K = enclosure thermal resistance per m²

For a metal enclosure:
■ K = 0.12 with internal fan
■ K = 0.15 without fan

Note: *Do not use insulated enclosures, as they have a poor level of conductivity.*

(1) Only for ATV 61H●●●M3, ATV 61H●●●M3X and ATV 61H●●●N4 drives.

Remote graphic display terminal functions

This display terminal is attached to the front of the drive. It includes the integrated 7-segment display terminal for drives supplied without a graphic display terminal.

■ Description
❑ Description of graphic display terminal
1 Graphic display unit:
- 8 lines, 240 x 160 pixels
- large digit display that can be read from 5 m away
- bar chart display

2 Assignable functions keys F1, F2, F3, F4:
- dialogue functions: direct access, help screens, navigation
- application functions: Local/Remote, preset speed.

3 STOP/RESET key: local control of motor stopping/fault clearing

4 RUN key: local control of motor operation

5 Navigation button:
- Press to save the current value (ENT)
- Turn ± to increase or decrease the value, or go to the next or previous line

6 FWD/REV key: reverses the direction of rotation of the motor

7 ESC key: aborts a value, parameter or menu to return to the previous option.

Note: Keys 3, 4 and 6 can be used to control the drive directly.

❑ Description of graphic display unit
1 Display line. Its content can be configured; the factory settings show:
- the drive status (example: RUN)
- the active control channel (example: "Term": Terminals),
- the frequency reference
- Type of control (example: "LOC/REM").

2 Menu line. Indicates the current menu or submenu.

3 Area displaying menus, submenus, parameters, values, bar charts, in the form of a scrolling window, with a maximum of 5 lines.
The line or value selected using the navigation button is displayed in reverse video (see opposite).

4 Section displaying the functions assigned to the keys F1 to F4 and aligned with them, for example:
- >> : Horizontal scrolling to the right, or proceeding to the next menu or submenu, or, in the case of a value, decreasing the value, displayed in reverse video (see example opposite)
- << : Horizontal scrolling to the left, or proceeding to the next menu or submenu, or, in the case of a value, increasing the value, displayed in reverse video
- "T/K" : Local Remote function assigned to key F4,
- HELP: Contextual help
- Code: Displays the selected parameter code
- Other functions (application functions) can be assigned to these keys via the 1.6 COMMAND menu.

5 ☐ : Means that this display window does not scroll further down.
▼ : Means that this display window can scroll further down.

6 ▲ : Means that this display window can scroll further up.
☐ : Means that this display window does not scroll further up.

Remote graphic display terminal functions (continued)

■ **Navigation: accessing menus and parameters**
Structure of main menus:

1 Drive menu:

Menu type	Function
1.1 SIMPLY START	Simplified menu for fast startup
1.2 MONITORING	Displays current values for motor, inputs/outputs and communication (command words, status words, etc.)
1.3 SETTINGS	Accesses the adjustment parameters, which can be modified during operation
1.4 MOTOR CONTROL	Accesses the motor parameters, including adjustment of motor control profiles
1.5 INPUTS/OUTPUTS CFG	Configures the I/O and transforms signals
1.6 COMMAND	Configures the command and reference channels
1.7 APPLICATION FUNCT.	Configures the application functions (preset speeds, PID regulator, etc.)
1.8 FAULT MANAGEMENT	Configures the fault management process
1.9 COMMUNICATION	Configures the communication networks
1.10 DIAGNOSTICS	Provides diagnostics for motor and drive, integrated test procedures, fault history
1.11 IDENTIFICATION	Identifies the drive and internal options
1.12 FACTORY SETTINGS	Restores factory settings (completely or by parameter group)
1.13 USER MENU	Accesses the parameters selected by the user
1.14 PROGRAMMABLE CARD	Accesses the parameters for the multipump card or the Controller Inside programmable card

2 Display line

3 Display screen: Displays values in the form of bar charts or digital values, depending on the extent of customization.

4 Main menu:

Menu type	Function
1. DRIVE MENU	See above (**1** Drive menu)
2. ACCESS LEVEL	4 access levels: basic, limited, advanced, expert
3. OPEN / SAVE AS	Transfers files between the graphic display terminal and the drive
4. PASSWORD	Provides password protection for the configuration
5. LANGUAGE	Choice of 6 languages available (English, German, Spanish, French, Italian and Chinese)
6. MONITORING CONFIG.	Customizes the display line **2** and the display screen **3** (bar charts, digital values)
7. DISPLAY CONFIG.	Configures how parameters are displayed: customization, selection for User menu, visibility, accessibility

■ **Password**
Altivar 61 drives allow individual parameters to be selected for password protection.
Rights can be set for save operations and for loading the configuration.

Integrated 7-segment display terminal

ATV 61●●●●●M3, ATV 61HD11M3X…HD45M3X and ATV 61H075N4…HD75N4
drives can be supplied without a graphic display terminal. In this case, they are
equipped with an integrated 7-segment display terminal.
This can be used to:
□ Display status and faults
□ Access and modify parameters

Start-up

The Altivar 61 drive is supplied ready for use for most applications.
When the drive is switched on, the menus for setting the language and access level
appear automatically.

■ **Simply Start menu**
By accessing the Simply Start menu directly, it is possible to:
□ Pre-program the drive for an application:
  - Select the relevant macro-configuration
  - 2-wire/3-wire control
□ Benefit from optimum motor performance:
  - Enter data from the motor rating plate
  - Auto-tuning.
□ Protect the motor by setting the drive's integrated electronic thermal overload relay

■ **Programming using macro-configurations**
Programming using macro-configurations offers the choice of five options corresponding to the various business areas and applications:
□ Start/stop
□ General use
□ PID regulation
□ Communication network connectivity
□ Ventilation pump.
Choosing one of these macro-configurations automatically assigns the functions, parameters and I/O, even in the case of option cards. Although the configuration is preset, it can still be modified, if necessary.

The Ventilation pump macro-configuration is set as the factory configuration.
The preset functions for each macro-configuration are given in the table below.

Type of macro-configuration		Start/stop	General use	PID regulation	Communication network connectivity	Ventilation pump.
Altivar 61 drive I/O

Example of a customized message

Maintenance, diagnostics

New functions have been added to the Altivar 61 drive to enable it to provide quick and simple maintenance, ultimately boosting productivity:

■ Response to faults or alarms
It is possible to use the alarm management or drive operation configuration functions to take corrective measures before stopping the machine.

■ Fault history and help
When a fault occurs, a help screen is available to quickly identify the cause of the fault.
As soon as the fault occurs, values such as speed, current, thermal state, timer are saved and restored in the fault history.
The last 8 faults are stored.

■ IDENTIFICATION menu
The IDENTIFICATION menu can be used to display the relevant serial numbers and software versions, thereby helping to manage the equipment base. This information, also available from the PowerSuite software workshop, can be exported to other database-type software applications.

■ Test functions
The Altivar 61 drive includes the following test functions:
□ Identifying any motor short-circuit before start-up
□ Running, via the graphic display terminal or PowerSuite software workshop, automatic procedures during maintenance operations aimed at testing:
 - the motor
 - the drive power components

The test results are shown on the graphic display terminal or using the PowerSuite software workshop.
It is also possible to write and read messages in the drive using the graphic display terminal or the PowerSuite software workshop.

■ Oscilloscope function
The Altivar 61 drive has an oscilloscope function, which produces traces that can be viewed using the PowerSuite software workshop.
The PowerSuite software workshop can also be used to carry out remote diagnostics via modem.

Telemecanique

Functions (continued)

**Variable speed drives
for asynchronous motors**
Altivar 61

Controlling the drive

■ Via the drive I/O
Control signals are transmitted via cable to the I/O. Functions are assigned to logic inputs, analog inputs, etc.
A logic input can be assigned to more than one function. This means that two functions can be controlled using a single signal, thereby limiting the number of inputs required.

The Altivar 61 drive I/O can be configured independently from each other. For instance,
□ A time delay can be applied when it comes to reading the logic inputs, so as to avoid any bounce-back from certain switches.
□ Transforming incoming signals on the analog inputs can help the drive fully adapt to the control devices and applications:
   - Minimum and maximum values for the input signal
   - Input filtering in order to eliminate unwanted interference from the signals received
   - Magnifying glass effect through delinearizing the input signal in order to increase the precision with small amplitude signals
   - "Pedestal" and "Deadband" functions for signals in order to prevent low speed operations which can have an adverse effect on the application
   - "Mid-point" function, which can be used from a unipolar input signal to obtain a bipolar output signal to control the speed and direction of rotation
□ Transforming analog outputs which transfer information sent by the drive to other devices (display units, drives, PLCs, etc.):
   - voltage or current output signal
   - minimum and maximum values for the output signal
   - output signal filtering

Logic outputs can be delayed on activation and deactivation. The output state can also be configured when the signal is active.
The frequency control signals are also transformed by the drive:
□ signal frequency minimum and maximum values (30 kHz on the extended I/O card's RP input).

■ Via the remote graphic display terminal
The rotation commands and references (speed or PID) can be controlled via the graphic display terminal. Some application functions can also be assigned to the function keys F1, F2, F3 and F4 on the graphic display terminal. It is possible to manage a change in command and/or reference source (bumpless function) in different ways.
Example: two options are offered when switching control from via the terminals to via the graphic display terminal:
□ stop the Altivar 61 drive, or
□ continue operation with a copy of the direction of rotation and reference

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

Controlling the drive (continued)

■ **Via a communication network**
◻ **I/O profile**
The I/O profile, which is easy and quick to use, can be used to control the Altivar 61 drive via the communication network, in the same way as via the I/O terminals.
When commands are sent via a network they are written in a command word. This word behaves like virtual terminals containing logic inputs.
Application functions can be assigned to the bits of this word. More than one function can be assigned to the same bit.

The commands and references can come from different sources, such as the terminals, graphic display terminal or communication networks.
Each source can be set or switched individually using logic inputs or command word bits.

The I/O profile is supported by all integrated communication ports (Modbus, CANopen), as well as by all the communication cards available (Ethernet TCP/IP, Fipio, Profibus DP, etc.).

◻ **CiA DSP 402 profile ("Device Profile Drives and Motion Control")**
This profile from the organization CiA (CAN in Automation) describes standard functions, parameters and operation for variable speed drives.
This standard is an extension of the Drivecom profile. The Altivar 61 drive complies with the CiA DSP 402 standard and it supports the following 2 modes in this profile: separate and not separate.

Separate mode
The Start/Stop commands and references can come from different sources.
Example: the speed reference is transmitted by the Ethernet TCP/IP network and the Start/Stop commands by the logic signals wired on the terminals.

Each source can be set or switched individually using logic inputs or command word bits.

Not separate mode
The Start/Stop commands and references (speed, torque, PID, etc.) come from the same source (example: CANopen bus).

It is possible to replace this source by another one, using a logic input or command word bit.

The CiA DSP 402 profile is supported by all integrated communication ports (Modbus, CANopen), as well as by all the communication cards available (Ethernet TCP/IP, Fipio, Profibus DP, etc.).

◻ **ODVA profile**
The ODVA profile is supported by the DeviceNet communication card.

Altivar 61

Functions suitable for pumping and ventilation applications

■ **Motor control profiles**
□ **Energy saving ratio**
This type of command makes it possible to optimize the energy consumed based on the load applied to the machine.

□ **Quadratic ratio (Kn^2)**
This type of command is optimized for centrifugal pumps and ventilators.

■ **PID regulator**
This can be used to regulate a process with a reference and feedback given by a sensor.
Function suitable for controlling traction on a winder.

ACC: acceleration, dEC: deceleration, LI: logic inputs, B: Speed reference.

□ **Internal references**
  - rPI: reference transmitted by the graphic display terminal or a communication network.
  - A: reference given by Fr1 or Fr1b with the summing, subtraction and multiplication functions, as appropriate.
The "PII" parameter is used to choose between these two references.

□ **Preset PID references**
2 or 4 PID references are available. Table showing combinations of selected PID references:

LIx (Pr4)	LIy (Pr2)	Reference
0	0	rPI or A
0	1	rP2
1	0	rP3
1	1	rP4

Sleep

Wake-up

LSP: Low speed
SLE: Adjustable restart threshold
tLS: Maximum low speed operating time
rSL: Restart error threshold

Example of operation of sleep/wake-up function

■ **PID regulator (continued)**
□ **PID feedback**
PID feedback can be assigned to one of the analog inputs (AI1 to AI4) or the frequency control input (RP), depending on the option cards present. It can also be transmitted by a communication network (network AI).

The following 4 functionalities can be used in combination with the PID regulator:
□ **PI feedback supervision**
□ **Sleep/wake-up**
This function is used in addition to the PID regulator to avoid extended operation at too low speeds that is unnecessary or undesirable.
It stops the motor following a period of reduced speed operation. This duration (tLS parameter) and this speed (LSP + SLE parameters) can be adjusted.
It restarts the motor if the error or the PID feedback exceeds an adjustable threshold (rSL or UPP parameters depending on the threshold).
□ **Activate sleep mode by flow detection**
This function is used in applications where zero flow cannot be detected by the sleep function alone.
□ **Alarms**
Minimum and maximum monitoring thresholds of the PID regulator feedback and monitoring threshold of the PID regulator error.
□ **Predictive speed reference**
This reference can come from the terminals (analog inputs, etc.), the graphic display terminal or a communication network.
This speed input gives an initial reference for starting.

□ **Auto/Man.**
This can be used to switch from speed regulation mode (Man.) to PID regulation mode (Auto). A logic input or command word bit is used for switching.
Speed regulation mode (Man.)
The manual reference is transmitted via the terminals (analog inputs, preset speeds, etc.).
With manual switching, the speed reference changes according to the ramp times ACC and dEC.
PID regulation mode (Auto)
In automatic mode it is possible to:
  - Adapt the references and feedback to the process (transformation)
  - Correct a PID inversion
  - Adjust the proportional, integral and derivative gains (Kp, Ki and Kd)
  - Shunt the integral
  - Use the "alarm" on the logic output or display it on the graphic display terminal, if the threshold is exceeded (Max. feedback, Min. feedback and PID error)
  - Display the PID reference, PID feedback, PID error and PID output on the graphic display terminal and assign them to an analog output
  - Apply a ramp (time = PrP) to the PID reference.
The motor speed is limited to between LSP and HSP.
It is displayed as process values.

■ **Forced operation**
In combination with the function inhibiting all faults, this function allows the run command to be forced in a defined direction and the reference to be forced to a configured value.

■ **Flow limit**
Allows the flow of a fluid to be limited, for pumps.

Functions (continued)
Variable speed drives
for asynchronous motors
Altivar 61

Other application functions

■ 2-wire control
This can be used to control the direction of operation by means of a stay-put contact.
It is enabled by means of 1 or 2 logic inputs (non-reversing or reversing).

This function is suitable for all non-reversing and reversing applications.
3 operating modes are possible:
□ Detection of the state of the logic inputs
□ Detection of a change in state of the logic inputs
□ Detection of the state of the logic inputs with forward operation always having priority over reverse

Altivar 61 control terminals
24 V   LI1   LIx

LI1: forward
LIx: reverse

Wiring diagram for 2-wire control

■ 3-wire control
This can be used to control the operating and stopping direction by means of pulsed contacts.
It is enabled by means of 2 or 3 logic inputs (non-reversing or reversing).

This function is suitable for all non-reversing and reversing applications.

Altivar 61 control terminals

160   Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

□ **Acceleration and deceleration ramp profile**
This can be used to gradually increase the output frequency starting from a speed reference, following a linear profile or a preset profile.

In the case of applications involving handling, packaging and passenger transport, the use of S ramps takes up mechanical play and eliminates jolts and also limits "non-following" of speed during rapid transient operation of high-inertia machines. Selecting "linear", "S", "U" or customized profiles assigns both the acceleration and deceleration ramps.

S ramps	U ramps	Customized ramps

FrS: Nominal motor frequency
t1: Ramp time set
$t2 = 0.6 \times t1$
The curve coefficient is fixed.

FrS: Nominal motor frequency
t1: Ramp time set
$t2 = 0.5 \times t1$
The curve coefficient is fixed.

FrS: Nominal motor frequency
tA1: Can be set between 0 and 100% (of ACC or AC2)
tA2: Can be set between 0 and (100% - tA1) (of ACC or AC2)
tA3: Can be set between 0 and 100% (of dEC or dE2)
tA4: Can be set between 0 and (100% - tA3) (of dEC or dE2)
ACC: Acceleration ramp 1 time
AC2: Acceleration ramp 2 time
dEC: Deceleration ramp 1 time
dE2: Deceleration ramp 2 time

Example of switching using logic input LI4

Acceleration 1 (ACC) and deceleration 1 (dEC):
- adjustment 0.01 to 9000 s
- factory setting 3 s
Acceleration 2 (AC2) and deceleration 2 (dE2):
- adjustment 0.01 to 9000 s
- factory setting 5 s
HSP: high speed.

□ **Ramp switching**
This can be used to switch 2 acceleration and deceleration ramp times, which can be adjusted separately.
Ramp switching can be enabled by:
  - a logic input
  - a frequency threshold
  - a combination of the logic input (or a command word bit) and the frequency threshold
  - a command word bit

Function suitable for:
  - material handling with smooth starting and approach
  - machines with fast steady state speed correction

□ **Automatic adaptation of deceleration ramp**
This can be used to automatically adapt the deceleration ramp if the initial setting is too low when the load inertia is taken into account. This function prevents the drive from locking in the event of an overbraking fault.
When this function is active and a short deceleration time has been set, the drive optimizes the motor power supply in order to achieve a high braking torque.

Function suitable for all applications which do not need to stop at a precise moment and do not use braking resistors.

Automatic adaption must be disabled for machines with a stop position on a ramp and using a braking resistor.

Presentation: pages 4 to 7	Characteristics: pages 8 to 15	References: pages 18 to 21	Dimensions: pages 90 to 111	Schemes: pages 112 to 127

Telemecanique

161

Variable speed drives
for asynchronous motors
Altivar 61

Preset speed settings

■ **Preset speeds**

This can be used to switch preset speed references.
Choose between two, four or eight preset speeds.
Enabled by means of 1, 2 or 3 logic inputs.
Preset speeds can be set in increments of 0.1 Hz, from 0 Hz to 500 Hz or 1000 Hz, depending on the rating.

Function suitable for material handling and machines with several operating speeds.

The speed achieved with the LI3 and LI4 inputs at 0 is LSP or speed reference, resulting from the operations carried out on the references.

Factory settings:

1st speed: LSP (low speed or speed reference)

2th speed: 10 Hz

3th speed: 15 Hz

4th speed: 20 Hz

Example of operation with 4 preset speeds and 2 logic inputs

■ **JOG operation**

This can be used for pulse operation with minimum ramp times (0.1 s), limited speed reference and minimum time between 2 pulses.
It is enabled by 1 logic input and pulses given by the operating direction command.

Function suitable for machines with product insertion in manual mode
(example: gradual movement of the mechanism during maintenance operations).

Speed reference: can be set from 0 to 10 Hz, factory setting 10 Hz.

JGt: minimum time between 2 pulses, which can be set between 0.5 and 2 s.

Example of JOG operation

■ **Limiting low speed operating time**

The motor is stopped automatically after a period of operation at low speed (LSP) with a zero reference and a run command present.
This time can be set between 0.1 and 999.9 seconds (0 corresponds to an unlimited time). Factory setting 0 s. The motor restarts automatically on the ramp when the reference reappears or if the run command is interrupted and then re-established.

Function suitable for automatic Stops/Starts.

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

■ **Motor control types**

□ **Flux Vector Control with sensor (FVC)**
In voltage mode, this control type can be used to obtain the best static and dynamic torque performance.

□ **Sensorless Flux Vector Control**
In voltage mode, this control type can be used with a single motor or motors connected in parallel.
In current mode, this profile performs better than the previous type, but it cannot supply power to motors connected in parallel.

□ **2-point Vector Control**
The zone for operating at constant power can be optimized by defining an additional point in the control profile.
This function should be used with motors offering a two-part defluxing zone.
It can be used to limit the voltage at the motor terminals when the motor is being powered by a high line supply.

□ **Voltage/frequency ratio**
This control type is particularly suitable for special motors (high-speed motors, synchronized asynchronous motors, etc.). The ratio can be adjusted by 2 or 5 points and used to achieve output frequencies of up to 1000 Hz.

□ **Synchronous motor**
This control type is exclusively reserved for controlling open loop synchronous permanent magnet motors with sinusoidal electromotive force (EMF).

■ **Limiting motor overvoltage**
The Altivar 61 drive inverter bridge control can be used to limit overvoltage in the motor terminals, which is double the voltage level in the DC bus (Stressless PWM). This function is useful in cases where long lengths of cabling, rewound motors or motors in a low isolation class are involved.

■ **Auto-tuning**
Auto-tuning can be performed:
□ using a dialogue tool (graphical display terminal, PowerSuite software workshop, integrated 7-segment display terminal)
□ via a communication network
□ automatically every time the drive is switched on
□ by enabling a logic input.

Auto-tuning can be used to enhance application performance.
In Flux Vector Control mode (FVC open loop with voltage regulation), certain parameters are measured periodically.
Saving the motor thermal state can help to compensate exactly for the motor resistors, even after the drive has been switched off.

■ **Switching frequency, noise reduction**
The switching frequency setting permits a reduction in the noise generated by the motor for any application requiring a low level of noise.
The switching frequency is modulated randomly in order to avoid resonance. This function can be disabled if it causes instability.
Switching the intermediate DC voltage at high frequency is useful for supplying the motor with a current wave having little harmonic distortion.
The switching frequency is adjustable during operation to reduce the noise generated by the motor.
Value: 1 to 16 kHz depending on rating

Telemecanique

163

Variable speed drives
for asynchronous motors
Altivar 61

■ Motor fluxing
This can be used to obtain rapid high torque on start-up; magnetic flux needs to be already established in the motor.
There is a choice between open loop or closed loop operation.

In continuous mode, the drive automatically establishes the flux when it is powered up.

In non-continuous mode:
□ If a logic input or command word bit is assigned to the motor fluxing command, flux is established when the command is confirmed.
□ If neither a logic input nor command word bit has been assigned, or if the latter are not active when a run command is given, fluxing occurs when the motor starts.

Fluxing is accelerated if a higher current than the nominal motor current is applied, then it is set to the value of the motor no-load current.

■ Output contactor command
This allows the drive to control a contactor located between the drive and the motor. The request to close the contactor is made when a run command appears. The request to open the contactor is made when there is no current in the motor.

Note: *If a DC injection braking function has been configured it should not be left operating too long in stop mode, as the contactor only opens at the end of braking.*

■ Stop on thermal alarm
This can be used to:
□ Allow a movement to end before examining a thermal fault. There are two adjustable thresholds used to define the thermal state level which, when exceeded, makes a machine stop;
□ Prevent a new run command from being accepted as long as the drive and motor temperatures are not less than 100%.

Output contactor command

| Presentation: | Characteristics: | References: | Dimensions: | Schemes: |

164   Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

■ **Uncontrolled output cut**
It is possible to configure output phase loss protection, which will allow the drive or motor circuit to be broken without the drive becoming locked in fault mode and facilitate a smooth restart after the motor has been reconnected. The output phase loss may also lock the drive, depending on the configuration.

■ **+/- speed**
This can be used to increase or decrease a speed reference by means of 1 or 2 logic inputs, with or without the last reference being saved (motorized potentiometer function).
This function is suitable for centralized control of a machine with several sections operating in one direction or for control by a handling crane pendant control station with two operating directions.

Two types of operation are available:
□ Use of single action buttons: 2 logic inputs are required in addition to the operating direction(s).
□ Use of double action buttons: only 1 logic input assigned to + speed is required.

□ **Use of single action buttons**: 2 logic inputs are required in addition to the operating direction(s).

RDY	Term	+0.00Hz	0.0A

Example of "+/- speed" with 2 logic inputs, single action buttons and reference saving

□ **Use of double action buttons**: only 1 logic input assigned to + speed is required.

Logic inputs:

Forward   Reverse   + speed

a   c   b   d

a and b: 1st press
c and d: 2st press

	Released (- speed)	1st press (speed maintained)	2nd press (+ speed)
Forward button	–	a	a and b
Reverse button	–	c	c and d

LSP: low speed, HSP: high speed

Example with double action buttons and 1 logic input
Note: This type of +/- speed control is incompatible with 3-wire control.

Functions (continued)

Variable speed drives
for asynchronous motors
Altivar 61

Example of +/- speed around a 2-wire control reference

☐ **Reference saving**
This function is associated with +/- speed control.
This can be used for reading and saving the last speed reference prior to the loss of the run command or line supply. The reference saved is applied the next time a run command is received.

☐ **+/- speed around a reference**
The reference is given by Fr1 or Fr1b, including, if relevant, the summing, subtraction and multiplication functions, as well as the preset speeds.
During the run command the drive goes to the reference, following the acceleration and deceleration ramps (pressing +/- speed makes the speed vary around this reference according to acceleration ramp 2 and deceleration ramp 2).
+ or - speed variation around the reference is limited to a percentage of the reference (SRP parameter). When operation has stopped, the amended reference is not saved.
The maximum total reference is always limited by high speed (HSP parameter) and the minimum reference (LSP parameter).

■ **Automatic catching of a spinning load with speed detection** ("catch on the fly")
This function can be used to restart the motor smoothly after one of the following events, provided the run command is still present:
☐ loss of line supply or power off
☐ fault reset or automatic restart
☐ freewheel stop.

Once the event is over, the effective speed of the motor is detected in order to restart on a ramp at this speed and return to the reference speed. The speed detection time can reach 0.5 s.

This function is suitable for machines which suffer low motor speed loss during a power failure (high-inertia machines such as centrifuges, etc.).

| Presentation: pages 4 to 7 | Characteristics: pages 8 to 15 | References: pages 18 to 21 | Dimensions: pages 90 to 111 | Schemes: pages 112 to 127 |

166

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

■ **Undervoltage management**
Depending on the application, it is possible to configure the Altivar 61's response to
undervoltages or power failures.
If undervoltage occurs:
□ The Altivar 61 drive can continue operating with undervoltage levels up to -50%
(adjustable threshold)
□ If the drive locks as a result, management of the fault relay can be configured (open
or not). If the fault relay does not open an alarm is shown.

The Altivar 61 drive can also be configured to prevent the drive locking (using an
alarm):
□ Controlled stop according to the type of stop configured
□ Deceleration based on a ramp which it automatically adapts to maintain the
DC bus voltage, thereby preventing the drive from locking in fault mode
□ Instant IGBT (inverter bridge) loss followed by power supplied to the motor as soon
as the line voltage has reappeared. This function can be used to prevent the
Altivar 61 drive being reinitialized.

■ **Braking balance**
When several drives are connected on a common DC bus, this function can be used
to adjust the braking thresholds in order to balance the braking powers among the
various drives or braking units.

■ **Braking resistor thermal protection**
The Altivar 61 drive incorporates thermal protection for braking resistors if it is not
equipped with a thermal switch. If the resistor thermal state is too high an alarm can
be assigned to the logic output or the drive may lock in fault mode, depending on how
the function is programmed.

| Presentation: | Characteristics: | References: | Dimensions: | Schemes: |

167

Variable speed drives
for asynchronous motors
Altivar 61

■ **Parameter set switching (multi-parameter)**
This can be used to switch 3 sets of 15 parameters maximum when the motor is running.
Each set can contain a different value for each of the parameters. The sets are switched using 1 or 2 logic inputs or command word bits.

Function suitable for machines involving 2 or 3 manufacturing processes.

■ **Motor or configuration switching (multi-motor or multi-configuration)**
The Altivar 61 drive can have 3 configurations, which can be activated remotely, allowing it to adapt to:
□ 2 or 3 different motors or mechanisms in multi-motor mode. In this instance, the thermal state for all the motors is calculated and saved. This means that each motor is protected thermally.
□ 2 or 3 configurations for the same motor in multi-configuration mode. This function can also be used to save the current configuration in another memory zone, which it can be retrieved from.
Switching is carried out using 1 or 2 logic inputs, depending on the number of motors or configurations chosen (2 or 3).

Multi-motor and multi-configuration modes cannot be used together.

Schematic diagram for multi-motor mode

Example of reference switching

■ **Reference switching**
Switching between two references (speed, PID, etc.) can be enabled by:
□ a logic input
□ a command word bit
Reference 1 (Fr1) is active if the logic input (or command word bit) is at 0; reference 2 (Fr1b) is active if the logic input (or command word bit) is at 1.
References can be switched with the motor running.

Reference Fr1b, like Fr1, can originate from:
□ an analog input (AI)
□ a frequency control input (RP)
□ the graphic display terminal
□ the Modbus or CANopen bus
□ a communication card
□ the "Controller Inside" programmable card

Functions (continued)

**Variable speed drives
for asynchronous motors**
Altivar 61

A: drive reference
SA2, SA3: summing inputs
dA2, dA3: subtraction inputs
MA2, MA3: multiplication inputs.

■ **Operations on the references (summing, subtraction, multiplication)**
Summing, subtraction and multiplication inputs can be activated simultaneously.

The drive reference is thus:
□ reference of drive A = (Fr1 or Fr1b + SA2 + SA3 - dA2 - dA3) x MA2 x MA3

□ **Summing inputs**
They can be used to add 2 to 3 references from different sources to Fr1 or Fr1b (see "Reference switching").
The references to be added together are selected from all the possible types of reference.

Example:
Reference Fr1 or Fr1b from AI1
Reference SA2 from CANopen
Reference SA3 from a communication card
Reference of drive A = Fr1 or Fr1b + SA2 + SA3.

□ **Subtraction inputs**
They can be used to subtract 2 to 3 references from different sources from Fr1 or Fr1b (see "Reference switching").
The references to be subtracted are selected from all the possible types of reference.

Example:
Reference Fr1 or Fr1b from AI1
Reference dA2 from CANopen
Reference dA3 from a communication card
Reference of drive A = Fr1 or Fr1b - dA2 - dA3.

□ **Multiplication inputs**
They can be used to multiply 2 to 3 references from different sources by Fr1 or Fr1b (see "Reference switching").
The references to be multiplied are selected from all the possible types of reference.

Example:
Reference Fr1 or Fr1b from AI1
Reference MA2 from CANopen
Reference MA3 from a communication card
Reference of drive A = Fr1 or Fr1b x MA2 x MA3.

169

Functions (continued)

Variable speed drives
for asynchronous motors
Altivar 61

■ **Torque limit**
This can be used to limit the torque in the motor and generator quadrants using separate settings.

There are two types of torque limit:
□ one with a value set by a parameter
□ the other with a value given by an analog input or a frequency control input.

When both torque limit types are enabled it is the lowest value which is read. They can be switched using a logic input or command word bit.

This function is not available for voltage/frequency ratio.

The torque limit operates in both directions of rotation in motor or generator mode.

■ **Torque or current limit detection**
This function can be used to detect when the current or torque limit has been reached. Depending on the configuration, it is possible to:
□ use an alarm to signal this
□ lock the drive after an adjustable period of time.

■ **Current limit**
A 2nd current limit can be configured between 1.1 and 1.2 times the nominal drive current and it can be used to limit the rise in motor temperature and the torque.
Switching between 2 current limits can be enabled via:
□ a logic input
□ a command word bit

RDY   Term   +0.00Hz   0.0A
2nd CURRENT LIMIT.

Altivar 61

F: motor frequency

Run command

LIx (saved)

100 ms   100 ms   100 ms

- - - - - Analog reference

Example of how reference saving works

■ Reference saving
This can be used to:
□ Read and save the speed reference value of the analog input using a logic input when the command lasts longer than 0.1 s
□ Control the speed of several drives alternately via a single analog reference and a logic input for each drive
□ Enable via a logic input a line reference (serial link) on several drives in order to synchronize movements by eliminating variations when the reference is sent
The reference is acquired 100 ms after the rising edge of the acquisition request.
A new reference is not then acquired until a new request is made.

RDY	Term	+0.00Hz	0.0A

STOP CONFIGURATION

Type of stop	:	Ramp stop
Freewheel assign.	:	NO
Fast stop assign.	:	LI4
Ramp divider	:	0
DC inject. assign.	:	NO

Code   Quick

Configuring stop types

■ Stop types
□ Freewheel stop
This function stops the motor by resistive torque if the motor power supply is cut.

A freewheel stop is achieved:
  - by configuring a normal stop command as a freewheel stop (when a run command is over or a stop command occurs)
    - by enabling a logic input
    - by activating a command word bit

□ Fast stop
This can be used to achieve a braked stop with an acceptable deceleration ramp time (divided by an adjustable coefficient from 0 to 10) for the drive/motor unit to avoid locking in the event of an overbraking fault. If the coefficient is equal to 0 the motor decelerates as fast as possible.

This is used for conveyors with emergency stop electrical braking.
A fast stop is achieved:
  - by configuring a normal stop as a fast stop (when a run command is over or a stop command occurs)
    - by enabling a logic input
    - by activating a command word bit

□ Fastest possible stop
If the ramp divider coefficient is equal to 0 the motor decelerates as fast as possible.

□ DC injection stop
This can be used to brake high-inertia machines at low speed or maintain torque on stopping.
A DC injection stop is achieved:
  - by configuring a normal stop as a DC injection stop (when a run command is over or a stop command occurs)
    - by enabling a logic input
    - by activating a command word bit

The DC value and the standstill braking time are adjustable.

Telemecanique

171

Variable speed drives
for asynchronous motors
Altivar 61

■ **Motor thermal protection**
Motor thermal protection is provided by the drive:
□ directly, through PTC probes located in the motor windings
□ indirectly, via the integrated thermal relay. Indirect thermal protection is
implemented via continuous calculation of its theoretical temperature rise.

The microprocessor calculates the theoretical temperature rise of the motor based
on various elements:
□ the operating frequency
□ the current taken by the motor
□ the operating time
□ the maximum ambient temperature around the motor (40°C)
□ the type of motor ventilation (self-cooled or force-cooled)

Thermal protection can be adjusted from 0.5 to 1.2 times the nominal current,
depending on the drive type. It must be adjusted to the nominal current indicated on
the motor rating plate.
Note: *The motor thermal state memory returns to zero when the drive control part is switched off.*

Motor thermal protection curves

□ Self-cooled motors:
The tripping curves vary with the motor frequency.

□ Force-cooled motors:
Only the 50 Hz tripping curve should be considered, whatever the motor frequency.

■ **Drive thermal protection**
The drive thermal protection is provided by a PTC probe mounted on the heatsink or
integrated with the power module.

■ **IGBT thermal protection**
The drive manages the switching frequency intelligently according to the IGBT
temperature.
If the drive's current rating is exceeded (example: current higher than the nominal
drive current for a zero stator frequency), an alarm is displayed and a timer increases
for as long the alarm is present.

■ **Machine protection**
Makes it possible to detect under and/or overload.

Configuration of the drive's fault response

■ Configuring the drive's fault response (fault management)
Different responses can be configured for the drive in the event of a resettable fault occurring:
□ freewheel stop
□ drive switches to the fallback speed
□ drive maintains the speed at which it was operating when the fault
occurred until the fault disappears
□ stop on ramp
□ fast stop
□ DC injection stop
□ no stop (alarm activated)

List of resettable faults:
□ external fault
□ speed feedback loss
□ overspeed
□ output phase loss
□ auto-tuning fault
□ loss of 4-20 mA
□ PTC probe
□ drive overheating
□ motor overload if the thermal state is less than 100%
□ line overvoltage
□ overbraking
□ current/torque limit
□ IGBT overheating
□ communication faults (Modbus, CANopen and other communication networks),
□ process overload
□ process underload
□ PI supervision,
□ No flow.

■ Resetting resettable faults
This can be used to remove the last fault using a logic input, command word bit or the STOP/RESET key on the graphic display terminal.
The restart conditions after a reset to zero are the same as those of a normal power-up.
List of resettable faults, see "Configuring the drive's fault response".
Line supply undervoltage and input phase loss faults are reset automatically when the line supply is restored.

Function suitable for applications where drives are difficult to access, for example, a drive placed on a moving part.

■ General reset (disables all faults)
This function inhibits all faults, including thermal protection (forced operation), and can destroy the drive.

Function suitable for applications where restarting may be crucial (conveyor in an oven, smoke extraction system, machines with solidifying products to be discarded).
The function is enabled by a logic input.
Fault monitoring is active if the logic input is at state 1.
All faults are reset on a change of state ⌐ of the logic input.

Note: Use of this function invalidates the guarantee.

Telemecanique

173

Functions (continued)

Variable speed drives
for asynchronous motors
Altivar 61

■ **Automatic restart**

This enables the drive to be restarted automatically after it has locked in fault mode if the relevant fault has disappeared and the other operating conditions permit a restart.

This restart is performed by a series of automatic attempts separated by increasingly longer waiting periods of 1 s, 5 s, 10 s then 1 minute for the rest.

The options for the restart process's duration are 5, 10 and 30 min., 1, 2, 3 hours and an unlimited time.

If the drive has not restarted after the configured time, it will lock and the procedure is abandoned until it has been powered off and on again.

The faults which allow the drive to be restarted in this way are:
□ line overvoltage
□ motor thermal overload
□ drive thermal overload
□ d.c. bus overvoltage
□ line phase failure
□ external fault
□ loss of 4-20 mA
□ PTC probe
□ serial link
□ current or torque limit
□ output phase loss
□ line voltage too low. For this fault, the function is always active, even if it is not configured.
□ process overload
□ process underload
□ PI supervision
□ no flow.
□ fault caused by CANopen, Modbus or other commmunication networks. These faults are reset automatically as soon as the command word or frequency reference is sent to the drive.

For these types of fault, the relay configured as a fault relay remains activated if the function is configured. The speed reference and operating direction must be maintained for this function.

This function is suitable for machines or installations which are in continuous operation or unmonitored, and where a restart will not endanger equipment or personnel in any way.

■ **PTC probe protection**

The probes can be connected directly to the drive control card or to the I/O option cards.

The way in which a temperature fault is recorded by the drive can be configured:
□ permanent record
□ only recorded when the drive's power section is switched on
□ only recorded when the motor is running

■ **IGBT testing**

When enabled, this function tests every IGBT and the motor connections in order to detect a short-circuit or an open circuit. This test is run every time the drive is powered on and before each motor start.

This function must not be enabled with machines with fast cycles in order to preserve the time for recording run commands.

■ **Resetting operating time to zero**

The drive operating and power-up times can be reset.

■ **External fault**

This function can lead to the drive locking if a fault occurs in the machine. This fault is flagged on the drive display unit. The fault is flagged if the signal is at 1 or 0, according to the function configuration.

174

Telemecanique

Variable speed drives
for asynchronous motors
Altivar 61

■ **Line contactor control**
This can be used on each run command to close the line contactor and open it when the motor is no longer on. The drive control section must be powered without fail by an external 24 V $\overline{}$ source.

This function must be used for simple sequences with a low number of Start/Stop operations (Start/Stop cycle longer than 60 seconds).

After a run command, if the line contactor is not closed the drive will lock after an adjustable period of time.

■ **Forced local mode**
Forced local mode imposes control via the terminals or graphic display terminal and disables all other control modes.
Switching to forced local mode may be activated via:
□ a logic input
□ a function key on the graphic display terminal

The following references and commands are available for forced local mode:
□ references AI1, AI2, etc. and command via logic inputs
□ reference and command via the graphic display terminal

Function compatibility table

■ **Configurable I/O**

The table below lists the incompatibilities between the functions and indicates the priority functions:

Stop functions have priority over run commands.

The Power Removal safety function takes priority over all other functions.

The selection of functions is limited:

□ By the number of drive I/O which can be reassigned: if necessary, add an I/O extension card.

□ By the incompatibility of certain functions with one another

Functions	PID regulator	Preset speeds	JOG operation	Synchronous motor
PID regulator			⊖

Presentation

The PowerSuite software workshop for PC is a user-friendly tool designed for setting up control devices for the following Telemecanique brand motors:
■ TeSys model U controller-starters
■ Altistart soft start/soft stop units
■ Altivar variable speed drives.
It includes various functions designed for setup phases such as:
■ Preparing configurations
■ Start-up
■ Maintenance.
In order to simplify the start-up and maintenance phases, the PowerSuite software workshop can use the Bluetooth® wireless link.

Functions (1)

Preparing configurations

The PowerSuite software workshop can be used on its own to generate the device configuration. It can be saved, printed and exported to office automation software.

The PowerSuite software workshop can also be used to convert:
■ An Altivar 28 drive configuration to an Altivar 31 drive configuration
■ An Altivar 38 drive configuration to an Altivar 61 drive configuration
■ An Altivar 58 or Altivar 58F drive configuration to an Altivar 71 drive configuration.

Start-up

When the PC is connected to the device, the PowerSuite software workshop can be used to:
■ Transfer the generated configuration
■ Adjust
■ Monitor. This option has been enhanced with new functions such as:
□ The oscilloscope
□ The high speed oscilloscope (minimum time base: 2 ms)
□ Displaying communication parameters
■ Control
■ Save the final configuration.

Maintenance

In order to simplify maintenance operations, the PowerSuite software workshop can be used to:
■ Compare the configuration of a device currently being used with a saved configuration
■ Manage the user's installed base of equipment, in particular:
□ Organize the installed base into folders (electrical equipment, machinery, workshops, etc.)
□ Store maintenance messages
□ Simplify Ethernet connection by storing the IP address.

User interface

The PowerSuite software workshop can be used to:
■ Present the device parameters arranged by function in the form of illustrated views of diagrams or simple tables
■ Customize the parameter names
■ Create:
□ A user menu (choice of particular parameters)
□ Monitoring control panels with graphic elements (cursors, gauges)
■ Perform sort operations on the parameters
■ Display text in five languages (English, French, German, Italian and Spanish).
The language changes immediately and there is no need to restart the program.

It also has online contextual help:
■ On the PowerSuite tool
■ On the device functions by direct access to the user manuals.

(1) Some functions are not available for all devices. See the table of function availability, page 179.

Telemecanique

Creation of monitoring control panels						
Sort operation on parameters						

■ Functions available
■ Functions not available

Connections (1)

Modbus communication bus

The PowerSuite software workshop can be connected directly to the device terminal port or Modbus network port via the serial port on the PC.

Two types of connection are possible:
■ With a single device (point-to-point connection), using a VW3 A8 106 PC serial port connection kit
■ With a number of devices (multidrop connection), using the XGS Z24 interface.

Ethernet TCP/IP communication network

The PowerSuite software workshop can be connected to an Ethernet TCP/IP network (see pages 182 to 187). In this case, the devices can be accessed:
■ Using a VW3 A58 310 communication card for the Altivar 61and 71 drives
■ Using a 174 CEV 300 20 Ethernet-Modbus bridge.

Bluetooth® wireless link

The PowerSuite software workshop can communicate via a Bluetooth® radio link with a device equipped with a Bluetooth® - Modbus VW3 A8 114 adapter. The adapter plugs into the device terminal port or Modbus network port and has a range of 10 m (class 2).

If the PC does not have Bluetooth® technology, use the VW3 A8 115 USB-Bluetooth® adapter.

Remote maintenance

Using a simple Ethernet connection, the PowerSuite software workshop can be used for remote monitoring and diagnostics.
When devices are not connected to the Ethernet network, or it is not directly accessible, various remote transmission solutions may be possible (modem, teleprocessing gateway, etc.). Please consult your Regional Sales Office.

(1) Please refer to the compatibility table on page 181.
(2) Please refer to our specialist "Automation platform Modicon Premium and Unity - PL7 software" and "Automation platform Modicon TSX Micro - PL7 software" catalogues.

Starters, drives and communication
Ethernet TCP/IP network
Transparent Ready concept

Presentation

Introduced by Schneider Electric, the Transparent Ready concept enables transparent communication between control system devices, production and management. Network technologies and the associated new services are used to share and distribute data between sensors, PLCs, workstations and third-party devices in an increasingly efficient manner.

Web servers embedded in network components and control system devices can be used to:
■ Access configuration data transparently
■ Perform remote diagnostics
■ Incorporate simple human/machine interface functions.

This concept is based on the Ethernet TCP/IP industrial standard which proposes a single network that meets most communication requirements from sensors/actuators through to production management systems.

Where a variety of communication systems are usually required, Transparent Ready standard technologies can result in significant cost savings in the areas of definition, installation, maintenance or training.

Transparent Ready is based on:
■ Ethernet TCP/IP-based services meeting control system requirements in terms of functions, performance and quality of services
■ Products including several ranges of PLC, distributed I/O, industrial terminals, variable speed drives, gateways and an increasing number of partner products
■ The ConneXium range of cabling accessories: hubs, switches, cables adapted to the environment and to the requirements of industrial conditions.

Services supported by the Altivar 61 and Altivar 71 drives

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive are connected to the Ethernet TCP/IP network via an Ethernet/Modbus 174 CEV 300 20 Ethernet/Modbus bridge.

The Altivar 61 and Altivar 71 variable speed drives are connected to the Ethernet TCP/IP network via a VW3 A3 310 communication card.
This card comes with a basic web server, which users can adapt completely according to the application (Java or FactoryCast development tool).

Telemecanique

Characteristics

Structure	Topology	Industrial local area network conforming to ANSI/IEEE 802.3 (4th edition 1993-07-08) Star network
	Transmission mode	Manchester baseband. Half-duplex or full-duplex
	Data rate	10/100 Mbps with automatic recognition
	Medium	STP double shielded twisted pair, impedance 100 Ω ± 15 Ω for 10 BASE-T or category 5 Ethernet cable, conforming to standard TIA/EIA-568A
	Length of network	100 m maximum between Hub or switch and a station

Type of device	ATS 48, ATV 31	ATV 61, ATV 71
Type of interface	174 CEV 300 20	VW3 A3 310
Universal services	SNMP	HTTP, BOOTP, DHCP, FTP, TFTP, SNMP
Transparent Ready services	Modbus messaging	Modbus messaging, IO Scanning, FDR

Universal services

HTTP

HTTP "Hypertext Transfer Protocol" (RFC 1945) is a protocol used to transmit web pages between a server and a browser. HTTP has been used on the Web since 1990.

Web servers embedded in control system devices are at the heart of the Transparent Ready concept and provide easy access to devices anywhere in the world using a standard web browser such as Internet Explorer or Netscape Navigator.

BOOTP/DHCP

BOOTP/DHCP (RFC 1531) is used to supply devices (client) automatically with IP addresses and parameters. This avoids having to manage the addresses of each device individually by transferring their management to a server.
BOOTP identifies the client device by its Ethernet MAC address. This address is unique to each device and should be entered in the server each time the device is changed.
DHCP "Dynamic Host Configuration Protocol" identifies the client device by a name in plain language ("Device Name") which is maintained throughout the application: example: "Conveyor 23".

Altivar 61 and Altivar 71 drives can be given a name ("Device Name") by the terminal or the PowerSuite software workshop.
The FDR ("Faulty Device Replacement") service uses the standard DHCP and TFTP protocols.

FTP/TFTP

FTP, "File Transfer Protocol" (RFCs 959, 2228 and 2640) and TFTP, "Trivial File Transfer Protocol" (RFC 1123), are used to exchange files with devices.

Transparent Ready devices implements FTP for downloading firmware or custom web pages.
The FDR ("Faulty Device Replacement") service uses the standard DHCP and TFTP protocols.

SNMP

The Internet community has developed the SNMP standard , "Simple Network Management Protocol" (RFCs 1155, 1156 and 1157), to support the management of the various network components by means of a single system. The network management system can exchange data with SNMP agent devices. This function allows the manager to view the status of the network and devices, to modify their configuration and to return alarms in the event of a fault.

Transparent Ready devices are compatible with SNMP and can be integrated naturally into a network administered via SNMP.

Starters, drives and communication
Ethernet TCP/IP network
Transparent Ready concept

Transparent Ready services

Modbus communication standard

Modbus, the industry communication standard since 1979, has been ported to Ethernet TCP/IP, the backbone of the Internet revolution, to create Modbus TCP/IP, a totally open protocol on Ethernet. There is no need for any proprietary component, nor the purchase of a licence in order to develop a connection to Modbus TCP/IP.
This protocol can easily be ported to any device supporting a standard TCP/IP communication stack. The specifications can be obtained free of charge from the website: www.modbus.org.

Modbus TCP/IP, simple and open

The Modbus application layer is very simple and universally familiar. Thousands of manufacturers are already implementing this protocol. Many have already developed a Modbus TCP/IP connection and numerous products are currently available.
The simplicity of Modbus TCP/IP enables any small field device, such as an I/O module, to communicate on Ethernet without the need for a powerful microprocessor or a large amount of internal memory.

Modbus TCP/IP, high performance

Thanks to the simplicity of its protocol and the fast Ethernet throughput data rate of 100 Mbps, the Modbus TCP/IP achieves excellent performance. This means that this type of network can be used in realtime applications such as I/O Scanning.

I/O Scanning service

Schematic diagram

The Altivar 61 and Altivar 71 drives accept the I/O scanning service generated by:
■ The following automation platforms:
□ Premium equipped with a TSX ETY 410/5101 module
□ Quantum
□ Momentum M1E
■ A PC equipped with Modbus communication software with the I/O scanner function.
This service is used to manage the exchange of remote I/O on the Ethernet network after simple configuration and without the need for special programming.

The drive I/O are scanned transparently by means of read/write requests according to the Modbus Master/Slave protocol on the TCP/IP profile.

The I/O Scanning service can be configured, activated or deactivated by:
■ The PowerSuite software workshop
■ The standard web server.

Starters, drives and communication
Ethernet TCP/IP network
Transparent Ready concept

Transparent Ready services (continued)

Faulty Device Replacement (FDR) service

The FDR service uses standard DHCP and TFTP technologies with the aim of simplifying the maintenance of Ethernet devices.
It is used to replace a faulty device with a new product, ensuring its detection, reconfiguration and automatic restarting by the system, without the need for any delicate manual intervention.

The main steps are:
■ A device using the FDR service becomes faulty.
■ A similar device is taken out of the maintenance reserve base, preconfigured with the "Device_name" of the faulty device, then reinstalled on the network.
■ The FDR server (which can be a Quantum or Premium PLC Ethernet module) detects the new arrival, configures it with its IP address and transfers all its configuration parameters to it.
■ The substituted device checks that the parameters are fully compatible with its own characteristics, then switches to operational mode.

Web server

The Ethernet card in Altivar 61 and Altivar 71 drives incorporates a standard web server, in English.
The functions provided by this web server require no special configuration or programming of the PC supporting the web browser. Using a password, two levels of access can be defined to the web server: read-only or modification.

The standard web server provides access to the following functions:
■ Altivar Viewer
■ Data Editor
■ Ethernet Statistics
■ Security
■ …

The standard web server can be adapted or replaced by a customized web server depending on the requirements of the application and downloaded via FTP. Knowledge of the HTTP protocol and Java technology are required to be able to create or modify a web server.

Presentation

The Fipio fieldbus is a standard means of communication between control system components and conforms to the World FIP standard.
A Premium PLC (bus manager) can control 127 devices (agents) over a maximum distance of 15 km.
The Fipio bus manager is integrated in the PLC processor.

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive can be connected to the Fipio bus via an LUF P1 Fipio/Modbus gateway.

The Altivar 61 and Altivar 71 variable speed drives can be connected to the Fipio network via a communication card VW3 A3 A311.

The following devices can also be connected to the Fipio bus:
■ TSX Micro (2) or Premium Agent function *(1)* PLCs
■ The CCX 17 operator panel *(2)*
■ The Magelis XBT-F terminal with graphic screen *(3)*
■ The Magelis *i*PC industrial PC *(3)*
■ Advantys STB IP 20 distributed I/O *(4)*
■ Discrete, analog or application-specific Momentum distributed I/O *(5)*
■ Discrete or analog (IP 20) TBX distributed I/O *(1)*
■ TBX discrete (IP 65) or TSX E●F (IP67) dust and damp proof distributed I/O *(1)*
■ The TBX SAP 10 Fipio/AS-Interface gateway *(1)*
■ The LUF P1 Fipio/Modbus gateway
■ A PC terminal
■ Partner products in the Collaborative Automation programme.

Characteristics

Structure	Topology	Industrial bus conforming to the World FIP standard Subscribers linked via daisy-chain or tap junctions
	Access method	Producer/consumer principle Bus management by a fixed arbitrator (bus manager)
	Transmission mode	Baseband physical layer on shielded twisted pair, according to standard NF C 46-604
	Data rate	1 Mbps
	Medium	Shielded twisted pair 150 Ω. Optical fibre 62.5/125 with the use of electrical/fibre optic repeaters
	Number of subscribers	32 maximum per segment 1 manager + 127 agents maximum over all segments The number of Fipio agents is limited by the memory capacity of Premium processors (62 Altivar drives maximum) *(1)*
	Number of segments	Unlimited in tree or star architectures Limited to 5 cascaded segments The link between 2 subscribers may cross 4 electrical or electrical/fibre optic repeaters maximum
	Length of bus	15,000 m maximum 1,000 m maximum without repeater for an electrical segment 5,000 m maximum for 5 electrical segments 3,000 m maximum for 1 fibre optic segment

Type of device	ATS 48, ATV 31	ATV 61, ATV 71
Type of interface	LUF P1	VW3 A3 311
Profile	FED C 32P	FED C 32
Control and adjustment	26 configurable words	8 configurable words (communication scanner)
Monitoring	26 configurable words	8 configurable words (communication scanner)
Configuration and adjustment	1 indexed word Read/write access to all functions by the PLC application program

Documentation

The manuals and quick reference guides for starters and variable speed drives, as well as the user manuals for communication gateways, are available on the web site: www.telemecanique.com.

(1) To order other elements for connection to the Fipio bus, please consult our specialist "Automation platform Modicon Premium and Unity - PL7 software" catalogue.
(2) Please consult our specialist "Interfaces, I/O splitter boxes and power supplies" catalogue.
(3) Sold in lots of 2.
(4) Standard environment:
   - *no particular environmental constraints*
   - *operating temperature between + 5 °C and + 60 °C*
   - *fixed installation*
(5) Harsh environment:
   - *withstand to hydrocarbons, industrial oils, detergents, solder splashes*
   - *relative humidity up to 100%*
   - *saline atmosphere*
   - *significant temperature variations*
   - *operating temperature between - 10 °C and + 70 °C*
(6) Mobile installation: cables in accordance with VDE 472 part 603/H:
   - *use on a cable-carrier chain with bending radius 75 mm minimum*
   - *use on a gantry, provided that operating conditions such as acceleration, speed, length, etc are adhered to: please consult your Regional Sales Office*
   - *unauthorised use on robots, or multi-axis applications.*

Modbus bus
ATV 31
ATV 71
ATV 61
ATS 48

Modbus is a master/slave protocol.

Two exchange mechanisms are possible:
■ Request/response: The request from the master is addressed to a given slave. The master then waits for the response from the slave which has been interrogated.
■ Broadcasting: The master broadcasts a request to all the slave stations on the bus, which execute the command without transmitting a response.

The Altistart 48 soft start/soft stop unit and the Altivar 31, Altivar 61 and Altivar 71 variable speed drives have the Modbus protocol integrated as standard.

The Altistart 48 soft start/soft stop unit and the Altivar 31 drive are connected to the Modbus bus via their terminal port.

The Altivar 61 and Altivar 71 variable speed drives have 2 integrated communication ports:
■ A terminal port for connecting the graphic display terminal or an industrial HMI terminal (Magelis type)
■ A Modbus network port.
As an option, they can also be equipped with a VW3 A3 303 Modbus/Uni-Telway communication card which offers additional characteristics (4-wire RS 485, ASCII mode, etc.).

Characteristics

Type of device		ATS 48	ATV 31	ATV 61, ATV 71		
Type of connection		Terminal port			Network port	Communication card
Structure	Connector	RJ45	RJ45	RJ45	RJ45	9-way female SUB-D

Telemecanique

Starters, drives
and communication
Communication via Modbus bus

Configuration on the basis of polarization

The specification of the physical layer provided by standard RS 485 is incomplete.
Various polarization diagrams can therefore be applied depending on the environment in which the equipment is to be used.
The Modbus standard specifies the polarization exactly *(1)*.

		Master	
		With polarization 4.7 kΩ	With polarization 470 Ω
Slave	Without polarization	Configuration not recommended.	Modbus type configuration 31 slaves. Length of bus: 1,300 m Tap link: 3 m maximum. RC line terminators (R =120 Ω, C = 1 nF).
	With polarization 4.7 kΩ	Uni-Telway type configuration 27 slaves. Length of bus: 1,000 m Tap link: 20 m maximum. RC line terminators (R =120 Ω, C = 1 nF).	Mixed configuration 18 slaves. Length of bus: 1,000 m Tap link: 20 m maximum. RC line terminators (R =120 Ω, C = 1 nF).

Documentation

The manuals and quick reference guides for starters and variable speed drives, as well as the user manuals for communication gateways, are available on the website: www.telemecanique.com.

Starters, drives
and communication
Communication via Modbus Plus network

The Modbus Plus network is a high-performance industrial local area network which can be used to meet the needs of client/server type extended architectures, combining a high data rate (1 Mbps), simple low-cost transmission media and numerous messaging services.

The Altistart 48 soft start/soft stop unit and the Altivar 31 variable speed drive can be connected to the Modbus Plus network via an NW BM85000 gateway which has four RS 232 serial ports.

The Altivar 61 and Altivar 71 variable speed drives can be connected to the Modbus Plus network via a communication card VW3 A3 302

Communication services

The main data exchange services between subscribers connected to the network are:
■ The "Modbus messaging" service according to Modbus protocol
■ The "Global Data" service: each subscriber makes available 32 words for each of the 63 other network subscribers
■ The "Peer Cop" dialogue service: point-to-point transaction of 32 receive or transmit words

The "Global Data" and "Peer Cop" services are restricted to a Modbus Plus network with a maximum of 64 subscribers.

Altivar 61 and Altivar 71 drives are accessed by simple configuration in the PLC using "Peer Cop" and "Global Data" services.
These services enable rapid exchange of the main drive parameters:
■ The "Peer Cop" service for controlling and adjusting the drive
■ The "Global data" service for monitoring the drive

Other parameters, which are used less frequently, can be accessed by the Modbus messaging service.

Telemecanique

Characteristics

Structure	Topology	Bus
	Physical interface	RS 485
	Access method	Token bus
	Transmission mode	HDLC synchronous
	Data rate	1 Mbps
	Medium	Shielded twisted pair 120 Ω Optical fibre
	Number of subscribers per network	32, without repeater 64, with one or more repeaters
	Number of networks	4, separated by a maximum of 3 bridges
	Length of network	450 m maximum without repeater 1800 m maximum with 3 electrical repeaters 3000 m between 2 fibre optic repeaters
Services	Modbus messaging	Point-to-point requests with confirmation report: 200 bytes maximum, compatible with all Modbus subscribers
	"Global Data"	4096-byte shared database Cyclic exchange of 32 broadcast words Limited to one network This service does not cross bridges
	"Peer Cop" dialogue	Point-to-point or broadcast message Limited to one network This service does not cross bridges

Starters, drives
and communication
Communication via Uni-Telway bus

Presentation

The Uni-Telway bus is a standard means of communication between control system components (PLCs, HMI terminals, supervisors, variable speed drives, numerical controllers, etc).

The Uni-Telway bus requires a master station (Premium, TSX Micro PLCs) which manages the allocation of bus access rights to the various connected slave stations (HMI terminals, variable speed drives, etc). The slave stations can communicate with one another without programming the master station.
An industrial HMI terminal (Magelis type) can be connected directly to the bus and can be used to adjust drives without developing applications specific to the PLC.

The Altivar 61 and Altivar 71 variable speed drives can be connected to the Uni-Telway bus via a communication card VW A3 303.

Characteristics

Structure	Topology	Bus
	Physical interface	RS 485 isolated
	Link	Multidrop
	Access method	Master/slave type
	Transmission mode	Asynchronous transmission in baseband
	Data rate	4.8…19.2 Kbps
	Medium	Double shielded twisted pair
	Number of stations	28 maximum
	Length of bus	1000 m maximum excluding tap links
	Tap links	20 m maximum
Services	UNI-TE	Request/response of up to 240 bytes *(1)* initiated by any connected station. Unsolicited point-to-point data of up to 240 bytes *(1)* without confirmation report, initiated by any connected station. Broadcast messages of up to 240 bytes *(1)* initiated by the master station.
	Other functions	Transparent communication, via the master station, with any X-WAY architecture. Diagnostics, debugging, adjustment, programming of PLCs.
	Security	Check character on each frame, acknowledgement and, if required, repetition of messages ensure security of transmission.
	Monitoring	The bus status table, transmission error counters and station status can be accessed on each station.

Uni-Telway bus wiring system

(1) Limited to 128 bytes with the Premium and TSX Micro PLC terminal port.

and communication
Communication gateways LUF P

Presentation

Communication gateways LUF P allow connection between Modbus and field buses such as Fipio, Profibus DP or DeviceNet.

After configuration, these gateways manage information which can be accessed by the Modbus bus and make this information available for read/write functions (command, monitoring, configuration and adjustment) on the field buses.

An LUF P communication gateway consists of a box which can be clipped onto a 35 mm omega rail, allowing connection of up to 8 Slaves connected on the Modbus bus.

(1) Connection kit for PowerSuite software workshop.

Description

Front panel of the product

1 LED indicating :
- communication status of the Modbus buses,
- gateway status,
- communication status of the Fipio, Profibus DP or DeviceNet bus.

2 Connectors for connection to Fipio, Profibus DP or DeviceNet buses.

Underside of product

3 RJ45 connector for connection on the Modbus bus
4 RJ45 connector for link to a PC
5 24 V power supply

Software set-up

For the Fipio bus, software set-up of the gateway is performed using either PL7 Micro/Junior/Pro software or ABC Configurator software.
For the Profibus DP and DeviceNet buses, software set-up is performed using ABC Configurator.
This software is included:
■ in the PowerSuite software workshop for PC (see page 180),
■ in the TeSys model U user's manual.

Communication gateway LA9 P307

Presentation

Communication gateway LA9 P307 provides connection between the Profibus DP and Modbus buses. It is a Slave on the Profibus DP bus and Master on the Modbus bus. It manages information present on the Modbus bus to make it available for read/write functions in the Master PLC on the Profibus DP bus.

Gateway LA9 P307 consists of a box which can be clipped onto a 35 mm omega rail. It manages up to15 Slaves on the Modus bus.

Example of architecture

ATS 48   ATV 31

1 Gateway LA9 P307,
2 Tap-off cable VW3 P07 306 R10,
3 Modbus splitter box LU9 GC3,
4 Cable TSX CSA ●00,
5 Tap-link cable VW3 A8 306 R●●,
6 Tap-link cable VW3 A8 306 D30,
7 Line end adapter VW3 A8 306 RC.

Description

Gateway LA9 P307 comprises:
1 A SUB-D 9-way female connector for connection to the Profibus DP bus,
2 A line end adapter on the Profibus DP bus,
3 Gateway address coding on the Profibus DP bus,
4 Status signalling LED,
5 RJ 45 female connector for connection on the Modbus bus,
6 $\overline{}$ 24 V power supply.

Software set-up

The gateway is configured using the standard software tools for the Profibus bus.
For the Premium automation platform, use SYCON configurator software.
The user's manual (.PDF) and the gateway description file (.GSD) are supplied on diskette with the gateway.

Product reference index

The efficiency of Telemecanique branded *solutions*

Used in combination, Telemecanique products provide quality solutions, meeting all your Automation and Control applications requirements.

Simple machines
Altistart 01: 0.37 to 75 kW
Altivar 11: 0.18 to 2.2 kW
Altivar 31: 0.18 to 15 kW

Complex, high power machines
Altivar 71: 0.37 to 500 kW

Pumping and ventilation machines
Altistart 48: 4 to 1 200 kW
Altivar 11...347: 0.18 to 2.2 kW
Altivar 21: 0.75 to 30 kW
Altivar 61: 0.75 to 630 kW

A worldwide presence

Constantly available
■ More than 5 000 points of sale in 130 countries.
■ You can be sure to find the range of products that are right for you and which complies fully with the standards in the country where they are used.

Technical assistance wherever you are
■ Our technicians are at your disposal to assist you in finding the optimum solution for your particular needs.
■ Schneider Electric provides you with all necessary technical assistance, throughout the world.

Simply Smart !
