

P1000

240V Class: $\frac{3}{4}$ to 175 HP
480V Class: 1 to 1000 HP
600V Class: 2 to 250 HP

 **YASKAWA**™

The Flexible and Intuitive Solution for Fan and Pump Applications.

The P1000 drive provides simple, reliable, cost-effective control for variable-torque loads through 1000 HP. Specific application features, energy savings, and network connectivity make the P1000 a great choice for industrial fans and pumps.

Features and Benefits

Exceptional Quality

Enjoy peace of mind by knowing that you are considering a product from Yaskawa, the factory automation controls company with the highest reputation for quality and reliability. Historically, Yaskawa drives have demonstrated extremely high reliability with an average MTBF (mean time between failure) of 28 years or more. The new 1000 series products take reliability to the next level with a calculated design life that is twice as long as previous generations.

Highly Integrated Design results in fewer parts and interconnections, reducing the number of failure points.

Component Derating extends the life of any single part by selecting higher specifications (e.g., voltage, current) than what a circuit requires for normal operation.

Latest Generation IGBT Power Modules, capable of four times more thermal cycles than previous designs.

Enhanced Short Circuit Detection and Self Diagnostics provide additional protection against severe catastrophic conditions.

In addition, the P1000 is designed for use around the world, and carries agency certifications for all major geographical regions

Easy to Apply and Maintain

The P1000 is supported by user-friendly configuration tools. For local field access, the keypad interface features a multi-language LCD display, parameter storage, and application presets to make programming a simple task. It also has built-in memory for backup purposes. In addition, a USB Copy Unit can be loaded with a drive's program for convenient portable transfer of configuration between an office environment and the factory floor.

USB Copy Unit

Fan and Pump Application Presets

Start-up time has been reduced with preprogrammed application presets that allow for simple and easy start-up by answering simple motor and application information.

Application Presets: General Purpose;
Pump & Pump with PI Feedback Control;
Fan & Fan with PI Feedback Control

DriveWizard® computer software delivers configuration, monitoring, and trending functions enhanced by direct connectivity through the P1000's standard USB port.

- Online and Offline Editing
- Application Wizard
- Monitoring and Diagnostic Panels
- Trend Recorder and Playback
- Network Configurator
- Multidrive Support
- Drive Flash Support
- Project Converter
- Report and Export Generation
- Search Engine

Features and Benefits

Easy to Apply and Maintain

Real Time Clock (RTC)

Take advantage of the battery-backed clock that's built into the P1000's keypad display. With this feature, the P1000 can be controlled based on time of day, and can also provide time-stamped event information.

PI Process Control

Two separate process control loops are embedded in the P1000. One modifies drive speed based on setpoint and sensor feedback. A second control loop (with its own setpoint and feedback inputs) can be output to control something completely independent of the drive. Additionally, the P1000 provides a 24VDC, 150mA supply for applying power to sensors.

Selectable and User-Customizable Engineering Units

Allow for easy configuration of keypad display to match process and feedback devices such as PSI, GPM, Feet.

Preventative Maintenance Monitors

Maximize production and intelligently schedule your maintenance by making use of the P1000's special monitors that provide alarm information when a drive requires attention. Use this information to trigger discrete outputs or send the status across a network for upper level decision making.

- Cooling Fan Remaining Life
- IGBT (Power Module) Remaining Life
- Bus Capacitor Remaining Life
- Precharge Relay
- Drive (Heatsink) Temperature

Easy to Apply and Maintain

Highly Reliable and Easily Replaceable Cooling Fans

- Improved location for convenient access, even when mounted with heatsink external
- No tools required
- All ratings are 24Vdc powered

Removeable I/O Terminal Board with Drive Backup Memory

- All parameter changes automatically saved to both main control board and I/O board
- Leave I/O connected when replacing a drive
- Configuration is downloaded to replacement drive
- Reduces MTTR (Mean Time To Repair)

Underload Detection

Monitors the load and will stop the system in the event of a fan belt or pump shaft failure.

Dynamic Noise Control

Monitors the load at all times and reduces the output voltage automatically, reducing motor audible noise.

Features and Benefits

Maximum Flexibility

Enjoy a significant amount of standard control points. The P1000 can also expand to support popular communication networks.

Standard I/O and Communications

- Digital Inputs (8)
- Analog Inputs (3)
- Pulse Inputs (1)
- Digital Outputs (4)
- 2 Form C Relays
- 2 Form A Relays
- Analog Outputs (2)
- RS485 Modbus RTU Communication

Expansion Capability

- Analog Output Module (3 additional outputs)
- DeviceNet
- EtherNet/IP
- Modbus TCP/IP
- PROFIBUS-DP
- PROFINET
- BACnet
- Lonworks
- Metasys (N2)
- Apogee (P1)

Auxiliary Control Power Input

Keep your drives communicating over the network, even while main power is removed. The Auxiliary Control Power Input uses facility supplied 24Vdc to keep the drive's control and communication intact. Service your drive cabinets with the benefit of live control and communications without the need for main power and associated Arc Flash protection.

Maximum Flexibility

Space Saving Features

The P1000 offers world class power density resulting in an average size reduction of 30% as compared to previous generations (see individual rating dimensions). In addition, even more cabinet space can be saved by taking advantage of External Heatsink Mounting and Zero Side Clearance capability.

Physical Size Reduction

External Heatsink Solution
(Side View)

Zero Side Clearance
(40°C max ambient)

Type 12 Flange Configuration

P1000 is available in all ratings as a Type 12 Flange configuration that allows for mounting the drive with its heatsink out the back of any Type 12 enclosure. This allows for the majority of the drive's heat to dissipate on the external side, while keeping the enclosure small and sealed with Type 12 integrity.

Features and Benefits

Trip-free Operation

Keep your applications running with features designed to avoid interruptions that are typical with demanding load conditions.

- Optimal Decel automatically extends the programmed deceleration time based on the load condition and drive capability.
- Overvoltage Suppression limits the DC bus voltage by modulating output frequency to keep the drive out of the regenerative region.
- Overload Fault Prevention responds to heavy load conditions by adjusting output frequency and voltage to keep the drive's current within operating limits.
- Momentary Power Loss Ride-Thru puts the drive in standby mode during transient power losses and then automatically restarts, avoiding potentially costly power related shut down conditions.
- Bi-directional speed search allows the drive to start into a rotating load by quickly sensing the speed and direction of the motor and then seamlessly matching the drive's output.
- For applications that can dissipate losses in the motor, Over-Excitation Braking and High Slip Braking are good-performing, money-saving alternatives to dynamic braking.
- In the event of a power loss, Kinetic Energy Braking uses energy stored in the rotating load to keep the drive powered and bring the process to a controlled stop.

Speed Search

Kinetic Energy Braking

Environmental

Reduce your energy bill and contribute towards a cleaner environment with sustainable features designed into the P1000.

Energy Savings Benefits of Variable Speed

Using variable speed on pumps and fans results in very large energy savings as compared to other fluid or air control methods (valves, guide vanes, dampers, etc.). Additionally, the P1000 provides even greater savings with its Energy Saving Control that reduces unnecessary magnetizing current at reduced speeds.

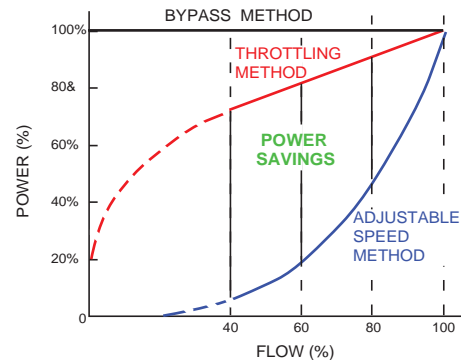

Power Quality Conscious

Built-in DC reactors (30 HP and larger) provide input harmonics benefit, and protection from input disturbances.

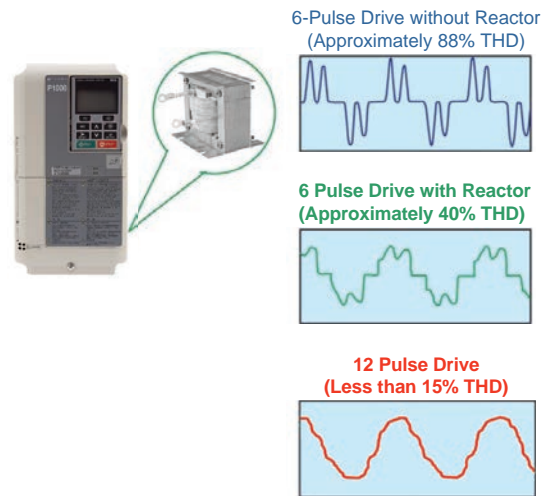

To further reduce harmonics reflected back to the utility power line, the P1000 is available with an integrated 12-pulse diode bridge from 40 to 1000 HP @ 480VAC (also requires the use of an external phase-shifting transformer).

Product Life Cycle Responsibility

The future of our environment and the earth's natural resources is very important to Yaskawa. The P1000 has been designed to minimize the use of harmful materials (e.g. lead, mercury, cadmium, etc.) and meets the requirements of RoHS (Restriction of Hazardous Substances)

Comparison of Power Requirements for Variable Speed and Throttling method

*1. The motor capacity (HP) refers to a NEC rated 4-pole motor. The rated output current of the drive output amps should be equal to or greater than the motor current. Select the appropriate capacity drive if operating the motor continuously above motor nameplate current.

*2. Assumes operation at the rated output current. Input current rating varies depending on the power supply transformer, input reactor, wiring connections, and power supply impedance.

*3. Direct application of DC power is not presently supported by the P1000's UL listing.

*4. Rated motor capacity is calculated with a rated output voltage of 230V.

*5. Carrier frequency is set to 2 kHz. Current derating is required in order to raise the carrier frequency.

Common Specifications

Item		Specifications
Control Characteristics	Control Methods	V/f Control (V/f)
	Frequency Control Range	0.01 to 400 Hz
	Frequency Accuracy (Temperature Fluctuation)	Digital input: within $\pm 0.01\%$ of the max output frequency (-10 to +40 °C) Analog input: within $\pm 0.1\%$ of the max output frequency (25 °C ± 10 °C)
	Frequency Setting Resolution	Digital inputs: 0.01 Hz Analog inputs: 1/2048 of the maximum output frequency setting (11 bit plus sign)
	Output Frequency Resolution	0.001 Hz
	Frequency Setting Methods	0 to +10 V, 4 to 20 mA, Pulse Train Input, Network Communications, Keypad
	Starting Torque ^{<1>}	V/f: 150% at 3 Hz
	Speed Control Range ^{<1>}	V/f: 1:40
	Accel/Decel Time	0.0 to 6000.0 s (4 selectable combinations of independent acceleration and deceleration settings)
	V/f Characteristics	User-selected programs and V/f preset patterns possible
Main Control Functions	Momentary Power Loss Ride-Thru, Speed Search, Overtorque/Undertorque Detection, 17 Step Speed (max), Accel/decel Switch, S-curve Accel/decel, 3-wire Sequence, Auto-tuning (rotational, stationary tuning), Dwell, Cooling Fan on/off Switch, Slip Compensation, Torque Compensation, Frequency Jump, Upper/lower Limits for Frequency Reference, DC Injection Braking at Start and Stop, Overexcitation Braking, High Slip Braking, PID Control (with sleep function), Energy Saving Control, Modbus Comm. (RS-422/485 max, 115.2 kbps), Fault Restart, Application Presets, Removable Terminal Block with Parameter Backup Function, Dynamic Noise Control.	
Protection Function	Motor Protection	Electronic thermal overload relay
	Momentary Overcurrent Protection	Drive stops when output exceeds 170%
	Overload Protection	Drive stops after 60 seconds at 120% of rated output current ^{<2>}
	Overvoltage Protection	240V class: Faults when DC bus voltage exceeds approx. 410 V; 480V class: Faults when DC bus voltage exceeds approx. 820 V; 600V class: Faults when DC bus voltage exceeds approx. 1040 V.
	Undervoltage Protection	240V class: Faults when DC bus voltage falls below approx. 190 V; 480V class: Faults when DC bus voltage falls below approx. 380 V; 600V class: Faults when DC bus voltage falls below approx. 475 V.
	Momentary Power Loss Ride-Thru	Stops modulating after 15 ms or longer power loss ^{<3>} . Resumes operation if power loss is less than 2 s (standard) ^{<4>}
	Heatsink Overheat Protection	Thermistor
	Stall Prevention	Stall Prevention is available during acceleration, deceleration, and during run.
	Ground Fault Protection	Electronic circuit protection ^{<5>}
Charge LED	Remains lit until DC bus voltage falls below 50 V	
Operating Environment	Area of Use	Indoors
	Ambient Temperature	-10 to +50°C (Chassis Installation) -10 to +40°C (Chassis with zero side clearance, or Type 1)
	Humidity	95% RH or less (no condensation)
	Storage Temperature	-20 to +60°C (short-term temperature during transportation)
	Altitude	Up to 1000 meters without derating, up to 3000 m with output current and voltage derating
	Shock	10 to 20 Hz: 9.8 m/s ² 20 to 55 Hz: 5.9 m/s ² (2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0032) 2.0 m/s ² (2A0250 to 2A0415 and 4A0208 to 4A0675)
Standards and Certifications	UL 508C, CSA C22.2, EN 61800-5-1	
Protection Design	IP00 enclosure, IP20/NEMA Type 1 enclosure ^{<6>}	

- <1> The accuracy of these values depends on motor characteristics, ambient conditions, and drive settings. Specifications may vary with different motors and with changing motor temperature. Contact Yaskawa for consultation.
- <2> Overload protection may be triggered when operating with 150% of the rated output current if the output frequency is less than 6 Hz.
- <3> May be shorter due to load conditions and motor speed.
- <4> A separate Momentary Power Loss Ride-Thru Unit is required for models 2A0004 to 2A0056, 4A0002 to 4A0031, and 5A0003 to 5A0032 if the application needs to continue running for up to 2 seconds during a momentary power loss.
- <5> Ground protection cannot be provided when the impedance of the ground fault path is too low, or when the drive is powered up while a ground fault is present at the output.
- <6> Removing the top protective cover or bottom conduit bracket from an IP20/NEMA Type 1 enclosure drive voids NEMA Type 1 protection while maintaining IP20 conformity. This is applicable to models 2A0004 to 2A0211, 4A0002 to 4A0165, and 5A0003 to 5A0032.

- All models are also available in Flange (Type 12 backside) versions (models end with Uxx)
- 480V Models 0058 through 0675 are also available in 12 Pulse versions (models begin with CIMR-PU4T and are of the Flange type (models end with Uxx))

Control Accessories Selection

Operator Interfaces

The P1000 includes a multi-language LCD interface with Real Time Clock (RTC) as standard.

Dimensions (inches)

Operator

Type	Model Number	Part Number
LCD	JVOP-180C	300-035-012

Operator Extension Cables

Part Number	Description
UWR0051	3 ft Extension Cable
UWR0052	10 ft Extension Cable

For remote installation (e.g., cabinet door), use one of the following membrane kits.

Part Number	Item	Installation
UUX000526 (Blank Membrane)		
UUX000527 (Yaskawa Logo Membrane)		

USB Interface Cable (for direct connection between the P1000 and a computer)

Requires P1000 USB device driver file, installed as part of DriveWizard® Industrial (SW.DW.30), available at Yaskawa.com

Part Number	Description
UWR-0638	USB Cable, 10 ft, male A-type to male B-type

USB Copy Unit (for downloading the same configuration to multiple drives)*

Part Number	Description
JVOP-181	USB Copy Unit with RJ-45 Cable and USB Cable

* Parameters can only be downloaded to a drive when the voltage class, capacity, control mode, and software version match

Mechanical Accessories Selection

Adapter Plates

Adapter Plates are used when replacing a P7 drive with a P1000, or when using a P7 pancake-mounted C1 filter. They consist of a simple plate the height and width (and with holes drilled for the mounting of) a P7 drive, with additional holes to match the mounting dimensions of the smaller P1000. This provides for a means to mount the P1000 drive to the plate; the drive/plate assembly may then be mounted using the old P7 mounting holes.

NEMA 1 Endcap Kits

This option consists of a top and bottom cover to convert a protected chassis drive to a NEMA 1 enclosed unit. This option DOES NOT provide additional space for mounting auxiliary components (i.e., circuit breaker, input fuses, reactor, etc.)

Notes:

(1) These ratings are already available as NEMA 1 (FAA) drives; the End Cap Kits for these ratings are shown here only for replacement purposes.

(2) Models 414 and larger will require special order drive part numbers to ensure compatibility with NEMA 1 kits. Consult factory.

(3) UUX000664 is a floor mount base that mounts underneath models 0930 and 1200. UUX000664S is an optional standoff kit which provides 5 in. of clearance between floor and bottom of mounting base.

External Heatsink Kits

When mounting standard drives with heatsink external (NEMA 1 backside), the following models require a separately sold bracket kit. Larger standard drives include brackets that must be detached from the back and reattached at the midpoint.

When mounting flange drives (models ending in Uxx), a "flange" feature is integral to the design, and therefore these kits are not used.

Capacitor Guards

Capacitor Guards are only required for P1000 IPOO models (those ending in AAA) to prevent exposure of internal components. NEMA 1 models (those ending in FAA) already include these guards as standard. Flange drives (those ending in UAA) do not require cap guards because the backside is protected by other means.

Power Accessories Selection

Reactors

Reactors are used either within the DC link circuit of a drive or at the drive's AC input terminals (line reactor). In both cases, the reactor adds impedance which can extend the life of a drive (when used on large power sources with low impedance), and reduce drive induced harmonic currents. In addition, AC reactors can be used at the drive's output terminals (load reactor) to help address a variety of installation challenges such as peak motor voltages that can occur with long motor cables.

P1000 drives 40 HP and larger have a built-in DC link reactor that provides 3% equivalent line reactance. P1000 drives 30 HP and less have terminals to add an external DC link reactor. AC line reactors can be added to all P1000 drives to add additional impedance.

DC Link Reactors

* Large P1000 drives have a built-in DC link reactor equivalent to 3% line reactance. 600V ratings are shown with 3% added AC reactance for 6% total.

Power Accessories Selection

EMC Filters

EMC filters are used to reduce high frequency noise on the input (line side) conductors to comply with CE (European) directives.

Mechanical Installation Planning

Mounting Choices

The P1000 drive provides installation flexibility. For mounting outside of a cabinet in a clean environment, a NEMA 1 kit (standard on frames 1 through 10, separately sold on larger models) is available.

The standard P1000 models (ending in Axx or Fxx) can also be mounted inside of a cabinet either conventionally (heatsink internal), or with its heatsink external (NEMA 1 integrity). An external heatsink (bracket) kit is required for standard P1000 models frames 1 through 6. Brackets are included on P1000 models frames 7 and larger.

In addition, a special Flange version (ending in Uxx) exists for all sizes. This solution is a factory assembly of special brackets and gasketing to provide NEMA 12 integrity on the backside when mounting heatsink external.

External Heatsink Mounting

Ventilation Space

Surrounding Drive Temperature	40°C	50°C
	Side Clearance (X)	0.0 in.

Drive Frame Size	1 - 11	12 and larger
Top/Bottom Clearance (Y)	4.72 in.	11.81 in.

Drive Dimensions

NEMA Type 1 [IP20] Diagram

P1000 with NEMA Type 1 Kit Installed

Protected Chassis/External Heatsink Diagram

P1000 Protected Chassis / External Heatsink Configuration

Notes:

1. The diagrams shown are simplified dimensional diagrams designed to display key outer dimensions of the drive. They are meant for planning purposes only. For more detailed dimensional/mounting data, please refer to the P1000 dimensional drawings on www.yaskawa.com
2. Drives with NEMA Type 1 Enclosures can be converted to protected chassis by removing the top and bottom covers.
3. When mounting standard drives with heatsink external (NEMA 1 backside), the following models require a separately sold bracket kit: CIMR-PU2A0004Fxx to 0081Fxx, CIMR-PU4A0002Fxx to 0044Fxx, and CIMR-PU5A0003Fxx to 0032Fxx. Larger standard drives include brackets that must be detached from the back and reattached at the midpoint.
4. When NEMA 12 backside integrity is required, the Flange version drives (ending with Uxx) must be ordered.

Power Terminal Functions

240V Class

Voltage	240V			Function
Model CIMR-PU[.....]	2A0004 to 2A0081	2A0110, 2A0138	2A0169 to 2A0415	
Max. Applicable Motor Capacity HP	0.75 to 30	40, 50	60 to 175	
R/L1	Main circuit input power supply			Connects line power to the drive
S/L2				
T/L3				
U/T1	Drive output			Connects to the motor
V/T2				
W/T3				
+2	• DC reactor connection (+1, +2) (remove the shorting bar between +1 and +2)	Not available		For connection • of the drive to a DC power supply (terminals +1 and – are not EU/CE or UL approved) • of a DC link reactor
+1		• DC power supply input (+1, –)	• DC power supply input (+1, –)	
–	Not available			
+3	Ground terminal (100 Ω or less)			Grounding terminal

480V Class

Voltage	480V			Function
Model CIMR-PU[.....]	4A0002 to 4A0044	4A0058, 4A0072	4A0088 to 4A1200	
Max. Applicable Motor Capacity HP	0.75 to 30	40,50	60 to 1000	
R/L1	Main circuit input power supply			Connects line power to the drive
S/L2				
T/L3				
U/T1	Drive output			Connects to the motor
V/T2				
W/T3				
+2	• DC reactor connection (+1, +2) (remove the shorting bar between +1 and +2)	Not available		For connection • of the drive to a DC power supply (terminals +1 and – are not EU/CE or UL approved) • of a DC link reactor
+1		• DC power supply input (+1, –)	• DC power supply input (+1, –)	
–	Not available			
+3	Ground terminal (100 Ω or less)			Grounding terminal

600V Class

Voltage	600V			Function
Model CIMR-PU[.....]	5A0003 to 5A0032	5A0041 to 5A0099	5A0125 to 5A0242	
Max. Applicable Motor Capacity HP	1 to 30	40 to 100	125 to 250	
R/L1	Main circuit input power supply			Connects line power to the drive
S/L2				
T/L3				
U/T1	Drive output			Connects to the motor
V/T2				
W/T3				
+2	• DC reactor connection (+1, +2) (remove the shorting bar between +1 and +2)	Not available		For connection • of the drive to a DC power supply (terminals +1 and – are not EU/CE or UL approved) • of a DC link reactor
+1		• DC power supply input (+1, –)	• DC power supply input (+1, –)	
–	Not available			
+3	Ground terminal (100 Ω or less)			Grounding terminal

Control Terminal Functions

Input Terminals

Classification	Terminal	Terminal Name (Function)	Default Setting	Function (Signal Level)
Multi-function Digital Inputs	S1	Multi-function input selection 1	Closed: Forward run (Open: Stop)	<ul style="list-style-type: none"> Photocoupler 24 Vdc, 8 mA Set the S3 jumper to select between sinking, sourcing mode, and the power supply.
	S2	Multi-function input selection 2	Closed: Reverse run (Open: Stop)	
	S3	Multi-function input selection 3	External fault, N.O.	
	S4	Multi-function input selection 4	Fault reset	
	S5	Multi-function input selection 5	Multi-step speed reference 1	
	S6	Multi-function input selection 6	Multi-step speed reference 2	
	S7	Multi-function input selection 7	Jog reference	
	S8	Multi-function input selection 8	Closed: External baseblock	
	SC	Multi-function input common		Multi-function input common
	SP	Digital input power supply +24 Vdc		24 Vdc power supply for digital inputs, 150 mA max (only when not using digital input option DI-A3)
	SN	Digital input power supply 0 V		NOTICE: Do not jumper or short terminals SP and SN. Failure to comply will damage the drive
Multi-function Analog/Pulse Train Inputs	RP	Multi-function pulse train input	Frequency reference	<ul style="list-style-type: none"> Input frequency range: 0 to 32 kHz Signal Duty Cycle: 30 to 70% High level: 3.5 to 13.2 Vdc, low level: 0.0 to 0.8 Vdc Input impedance: 3 kΩ
	+V	Power supply for analog inputs		+10.5 Vdc (max allowable current 20 mA)
	+24V	Power supply for sensor feedback supply		+24 Vdc (max allowable 150 mA)
	A1	Multi-function analog input 1	Frequency reference	<ul style="list-style-type: none"> 0 to 10 Vdc (input impedance: 20 kΩ) 4 to 20 mA, 0 to 20 mA (input impedance: 250 Ω) Voltage or current input must be selected by DIP switch S1 and H3-09.
	A2	Multi-function analog input 2	Frequency reference	
	A3	Multi-function analog input 3	Auxiliary frequency reference/PTC Input	
	AC	Frequency reference common		0 V
E(G)	Ground for shielded lines and option cards		-	

Output Terminals

Classification	Terminal	Terminal Name (Function)	Default Setting	Function (Signal Level)
Fault Relay Outputs	MA	N.O		30 Vdc, 10 mA to 1 A; 250 Vac, 10 mA to 1 A Minimum load: 5 Vdc, 10 mA
	MB	NC		
	MC	Fault output common		
Multi-Function Digital Output ^{*1}	MD			30 Vdc, 10 mA to 1 A; 250 Vac, 10 mA to 1 A Minimum load: 5 Vdc, 10 mA
	ME	Multi-function digital output 1	During run	
	MF			
	M1	Multi-function digital output 2	Zero speed	
	M2			
Monitor Output	M3	Multi-function digital output 3	Speed Agree 1	-10 to +10 Vdc, or 0 to +10 Vdc 0 V
	FM	Analog monitor output 1	Output frequency	
	AM	Analog monitor output 2	Output current	
	AC	Monitor common		

Communication Terminals

Classification	Terminal	Signal Function	Description	Function (Signal Level)
Modbus Communication ^{*2}	R+	Communication input	Modbus communication: use an RS-485 or RS-422 cable to connect the P1000	RS-485/422 Modbus communication protocol 115.2 kbps (max.)
	R-			
	S+	Communication output		
	S-			
IG	Shield ground			

*1: Refrain from assigning functions to digital relay outputs that involve frequent switching, as doing so may shorten relay performance life. Switching life is estimated at 200,000 times (assumes 1 A, resistive load).

*2: Enable the termination resistor in the last drive in a Modbus network by setting DIP switch S2 to the ON position.
